Intelligent Flexibility (IF)

Durability without added material or weight

High Performance Comfort

Easton's EC90 fork and road bar both feature intelligent flexibility. This means that the fork stays stiff and rigid when needed for high-performance cornering, yet absorbs the pounding of the open road for unparalleled riding comfort. Intelligent flexibility in our carbon road bar provides incredible rigidity when it's time to stand up and sprint, yet absorbs the pounding of the open road with more forgiveness than aluminum.
