

LOTUS Sport

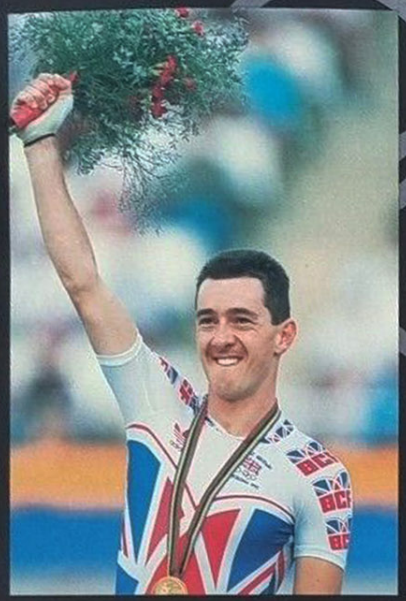

LOTUS Sport

Lotus: a British name revered in motorsport circles throughout the world for engineering excellence, uncompromising quality and pioneering design.

Lotus Sport: an exclusive range of British Eagle bicycles that carries the universally famous Lotus name and philosophy to the forefront of the world of cycling.

The Lotus Sport story began at the 1992 Barcelona Olympic Games with the highly acclaimed victory of the revolutionary Lotus carbon fibre monocoque pursuit bicycle, ridden by Chris Boardman.

Together they dominated the 4000m pursuit event, smashing the world record to win Britain's first gold medal of the games.

Now, the force behind this unique, aerofoil section, carbon fibre monocoque world-beating machine is available to you in a range of advanced professional racing machines and exclusive ATBs.

THE NEW 1994 LOTUS SPORT BICYCLES: PRECISION ENGINEERED FOR THE ULTIMATE IN PERFORMANCE

Developed at with British Eagle Cycles, the 1994 Lotus Sport range of hand-built ATBs and road bicycles represents the ultimate in two-wheeled engineering excellence and technical innovation.

Following in the tracks of the world-beating pursuit bicycle, the range topping Lotus Sport carbon fibre road bike boasts the same monocoque single cell construction, specially built and adapted for road use.

In addition to this stunning, fully built model, the Lotus Sport carbon fibre road bike is also available as a frame and fork set, allowing you to create the ultimate road machine to your own specifications.

The same frame geometry can also be experienced in the superbly engineered Columbus One-O-One lightweight road bike with Columbus SLX CrMo frame.

The choice of Lotus Sport All Terrain Bikes is no less impressive.

Models range from the aluminium framed Medina, newly created to provide an accessible entry level into the exclusive Lotus Sport world of cycling, through the Alivio, the LX and the XT to the incredible XTR suspension bike, all with aircraft specification 7005 heat treated seamless aluminium frames.

The carbon fibre XTR suspension completes the Lotus Sport ATB range and takes the technical innovation and monocoque construction of the Lotus Sport pursuit bike off road.

In keeping with our exacting standards, many of the components used throughout the Lotus Sport range have been specially designed and manufactured and are exclusive to the marque. The distinctive Lotus red leather saddle is a fine example of the style and craftsmanship to be found in every model.

From forks to gears and from chainsets to headsets, every item on every bike has been chosen to produce the feel, control and performance that you would expect from Lotus Sport.

DEVELOPED BY LOTUS SPORT. HAND-BUILT BY BRITISH EAGLE. POWERED BY SHEER ADRENALIN.
