Cycling for EveryBody™

The Pashley Special Needs range of tricycles is designed to bring the freedom of cycling to a wider audience. Experiencing the thrill of safely riding one of these cycles can benefit both the physical and mental well being of its pilot. Designed to withstand the toughest of use our models are available with a select range of options and accessories to help and assist in overcoming disability.

Tri-1

A modern styled tricycle with 7-speed derailleur gears. Easily adjustable for height and reach, and with a low step-through frame, the Tri-1 is a spirited performer with a wide range of options and accessories. Its stability soon inspires confidence in the rider, yet the rear wheels will fit through the average house doorway.
Available in 17" (43cm) and 15" (38cm) frame sizes.

Tri-1 fixed gear

Special version of the Tri-1 with a single, low, fixed gear. Helps overcome the problem of powering the pedals over 'top dead centre', with the added fun feature of being able to pedal backwards! Equipped as standard with a full-length metal chainguard, pedals with toe clips and straps, steering stop and short cranks.
Available in 17" (43cm) and 15" (38cm) frame sizes.

Picador

Enjoy the delights of cycling with the safety and stability that only a tricycle can provide. A traditionally styled trike that comes complete with 3-speed hub gears, metal chainguard, rear mudguards, basket and parking brake as standard. Powerful brakes and easy to use hub gears complement the tricycles' easy manners and hand built quality. Available in 17" (43cm) and 15" (38cm) frame sizes.

Add-1

The Add-1 adult tow trike attaches to the seat post of most bikes via a stainless steel towbar and universal safety hitch. With the hitch in place you can be assured that you and your companion can enjoy the ride without any fear of separation.
Available in 17" (43cm) and 15" (38cm) frame sizes.

Robin

A chunky, robust tricycle suitable for riders between 4 - 9 years. Built to last and provide endless fun, the Robin comes complete with low fixed gear, full length chaincase, and pedals with toe clips and straps. Practical mag style wheels help protect small hands and are practical to maintain whilst the steering stop assists in control of this chirpy trike.

Frame Size Tri-1, Tri-1 fixed gear and Picador are available in 17" (43cm) standard frame size for inside leg measurement 27.5" to 34.5" (70cm to 88cm), or 15" (38cm) frame size for inside leg range 25.5" to 32.5" (65cm to 83cm). All models have easy seat height adjustment, with some fore and aft movement on the saddle. The handlebar can be raised and lowered, and also canted to give the most comfortable position. For shorter reach, the handlebar stem can be reversed, bringing the bar much closer to the rider.

Folding Frame A useful feature to reduce overall length where storage or transport space is at a premium. This option also includes quick release fittings on the handlebar stem to allow easy lowering and positioning of the bars to achieve the most compact package.

Steering stop Avoids over-rotation of the front fork.

Rear basket For increased carrying capacity. Attaches to rear carrier.

Lower range gear An effective modification where ease of pedalling is more important than top speed, with the gear range lowered by a third. This option also includes a smart, full-length chainguard.

Short cranks 150mm cranks. Standard cranks are 170mm. Gives more natural pedalling action for shorter riders or those with restricted leg movement. Appropriately, the set comes with a smaller chainwheel, so it also lowers the gear range. Full-length cranks can be fitted at a later date if necessary.
(This solution is preferred over fitting crank shorteners.)

Pedals Alternative pedals supplied with toe clips and straps are a simple and cost effective solution to foot retention.

Wide saddle For increased support.

Back support Helps maintain a correct riding position. Available in adult and junior sizes.

N/B : All trikes are hand built to order. We can sometimes offer additional 'tweaks' (where appropriate) to suit the individual rider, such as setting the brake levers closer to the bar (for short or restricted reach), fitting the gear shifter on the left hand side or, if the trike is not to be used on public roads, routing both brake cables to a single lever. Multiple derailleur gears can be locked off in a single gear until the rider is confident enough to begin using the full range.
