PIVOT SCHOOL FOUNDING LEAGUE SPONSOR

HIGH SCHOOL ARIZONA CYCLING LEAGUE

USA National Interscholastic Cycling Association

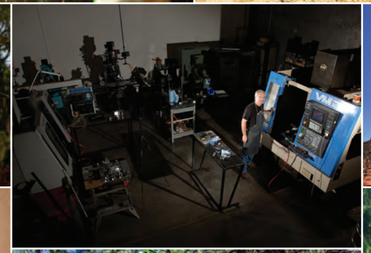

Welcome to Pivot Cycles

This has been an inspiring year for me and all of us at Pivot Cycles. Heading into our 6th year, we made the big move to a brand new facility that has allowed us to spread our wings and take Pivot Cycles to a whole new level. We've always had in house production where we develop new models, manufacture high tolerance hardware for our frames, handle initial production runs and build race team bikes and prototypes as well as manufacture the production tooling for our frames. Our new building has allowed us to add to add machinery (both CNC and testing) as well as have a more dedicated work space so that we can be as proud of our facility as we are of our bikes. If you ever make it down to Arizona, please feel free to give us a call and stop in. We love what we do here and we are always happy to show it off as well as have the opportunity to meet our customers. Who knows, if the timing is right, we may even be able to get a ride in together (I am always looking for a great excuse to go ride).

In addition to the big expansion, we have been busy supporting the next generation of mountain bike riders. We are proud to be the title sponsor of the Arizona High School Mountain Bike League and host to NICA's first coaches training in Arizona. We believe this is the future of not only our sport but also a great way to instill confidence and a healthy lifestyle in today's youth. Many school sports and PE programs are being cut and the stick and ball sports that remain seem to be taking themselves far too seriously to the exclusion of most kids. The High School Mountain Bike League program has a place for everyone and has the potential to not only develop the next generation of athletes, but also provide all high school age kids with an activity that they can continue to participate in and enjoy for the rest of their lives. (Like golf, but way better…sorry to all you golfers). The goal of NICA and the High School Mountain Bike League is to get kids on bikes and offer EVERY kid the opportunity to compete. So, if you have the opportunity to support your local chapter (or push for one to be started), please do. There's an excitement to this that takes me back to the days I started riding and I want every kid to experience the feeling, enjoyment, and life balance that mountain biking can provide.

Speaking of the enjoyment of riding, it's been a great year for riding as well. I feel truly privileged to have had the opportunity to ride with and receive feedback from some of the best riders in the world. Just recently we had the 'around the world' cycling record holder, Mike Hall, staying with us "fresh" off his convincing 14 day, 11 hour and 55 min win in the Tour Divide. He spent an average of 17 hours per day pedaling his Pivot LES from Canada to Mexico with elevation gains and terrain that makes my head spin just thinking about it. It's truly inspiring! In addition, we've had some big victories (too many to list here) and I have seen our riders do things on our bikes that I never thought would be humanly possible, and at speeds and heights that defy the laws of physics. I am privileged that, in our short six year history, we have such truly gifted athletes wanting to ride for Pivot. I get pretty revved up knowing that our bikes are performing at the highest levels of the sport for the best riders in the world. However, what makes me really happy is hearing from the true enthusiast that simply tells us how much they are enjoying their riding experience because of our bikes. It's really cool to hear about someone's KOM or personal best aboard their Pivot, and even more awesome to hear how much fun they had on their last ride. We've been busy this last year and at times the growth has been chaotic, but we always go the extra mile to make a new bike happen for that person who has a big bike trip coming up or an adventure they've been planning for a long time. We know how much more fun it will be on a new Pivot and we aim to make that dream a reality. As you look through our 2014 catalogue, we have added four new models to our growing line of bikes designed to deliver class-leading performance and fun in every category. So read on, check out the new bikes, and hopefully we can help make your dream a reality with a new Pivot this year! We look forward to seeing you on the trail.

MACH 6 CARBON

The Mach 6 has been in development for over two years and the excitement brewing behind this bike is nothing short of explosive.

This has honestly been the hardest secret for us to keep quiet. However, knowing the level of bike we've developed makes the unveiling of this incredible machine that much sweeter. The Mach 6 isn't like anything else in our line-up. Hell, it's not quite like anything we've built before! It's an all new machine designed from the ground up to optimize the 27.5" wheel platform and take the growing Enduro racing scene by storm. The Mach 6 is built with the singular purpose of going faster than anything else in the most aggressive terrain (both up and down).

Electric Blue
w/Shimano XT/XTR Pro Build
(Shown with optional KS LEV Integra dropper post)

PIVOT CYCLES®

1.877.85.PIVOT www.pivotcycles.com

The Mach 6 features the next generation of long travel dw-link design. With features like 6.1" (155mm) of travel, a low BB height (13.6"), longer top tubes, lower stand-over, and a slack head angle (66 degrees), built around an ultra stiff and responsive carbon chassis, the Mach 6 is a bike designed to push your capabilities and reward those willing to push the limits. We optimized the design with internal top tube cable routing, internal dropper post routing, ISCG 05 tabs, and a look that screams of speed. The Mach 6 absolutely rips for the aggressive trail rider.

The faster you go in technical terrain, the more confidence it provides. The Mach 6 rewards the pro enduro rider with new found levels of speed and performance and the enthusiast, a bike that will take your riding confidence to a whole new level.

- 6.1" (155mm) travel next generation dw-link® suspension design with position-sensitive anti-squat that pedals, accelerates and handles like nothing else for aggressive trail riding conditions.
- Pivot exclusive hollow box, high-compression internal molding technology allows for greater compaction and smoother internal walls resulting in a lighter, stronger, highly optimized frame design with the best stiffness to weight ratio in the class.
- Pivot specific, custom tuned Fox Float or Float X CTD shock technology: Increased performance and adjustment range allows riders to quickly and easily adjust for changing course or ride conditions.
- Internal top tube shift cable routing and down tube dropper seat post routing keeps cables clean and running smooth.
- Rubberized leather chainstay, inner seat stay, and down tube protectors for a quiet ride and higher impact resistance.

MACH429 CARBON

There's just something special about the Mach 429 carbon.

Every single magazine test rider, every customer that owns one, and every person that has had a test ride on the 429 carbon cannot believe the incredible stiffness and precision. It's as if at some point everyone accepted that a 29" full suspension bike was not going to be as stiff as their 26" counterparts…that is, everyone but us.

Team Green
w/Shimano XTR Build

PIVOT CYCLES®

1.877.85.PIVOT www.pivotcycles.com

With Pivot's exclusive hollow box internal molding technology, and attention to detail, the Mach 429 carbon goes where you point it, accelerates with authority and gives the 29er rider a level of precision and performance never before experienced. The perfectly tuned 4" (100mm) of dw-link suspension and incredible pedaling performance just add to the fun. It accelerates with the efficient immediacy of a hardtail, only you won't feel the bumps, and descending on the Mach 429 will put most 5" travel bikes to shame. The Mach 429 carbon delivers a perfect balance; taking all the riding efficiencies of 29" wheels and delivering the handling characteristics of a 26". It will make short work of any climb, descents a breeze, all with the comfort and efficiency of a dw-link Pivot so you can ride your best all day!

- Pivot exclusive hollow box, high-compression internal molding technology allows for greater compaction and smoother internal walls resulting in a lighter, stronger, highly optimized frame design with the best stiffness to weight ratio in the class.
- 100mm travel dw-link® suspension design with position-sensitive anti-squat makes for a 29er that pedals, accelerates and handles like a 26" wheel bike.
- Pivot specific, custom tuned Fox CTD shock technology: Increased performance and adjustment range allows riders to quickly and easily adjust for changing course or ride conditions.
- Under top tube internal shift cable routing with clean disk brake and dropper seat post routing.
- Rubberized leather chainstay, inner seat stay, and down tube protectors for a quiet ride and higher impact resistance.

MACH429

The Mach 429 has won awards and high praise from MTBR, Outside magazine, Dirt Rag and more but the highest praise is that bestowed by our current and future customers.

In the 2012 Mountain Bike Action reader survey, the Mach 429 was picked as the #1 future purchase beating all other manufacturers and brands of 29" bikes. That puts us at the top of a very elite group and for good reason. The Mach 429 has that special "something" that few if any other bikes can match. Sure, you've heard it all before from every manufacturer advertising that their 29er accelerates and handles like a 26" bike and theirs feels better then everyone else's.

Anodized Jet Black w/Shimano XT/XTR Pro Build

PIVOT CYCLES®

1.877.85.PIVOT www.pivotcycles.com

The difference with the Mach 429 is that IT DOES, and has countless reviews to back it up. The combination of dw-link suspension and Pivot engineering result in a bike that makes the ground beneath you nearly disappear and delivers acceleration, stiffness, traction and precision that can't be matched. It's light, nimble, and stable; inspiring confidence whether you are racing or just riding your favorite trail.

When you throw a leg over the Mach 429 you know immediately that you're riding the most efficient and fastest 29er full suspension bike in the world.

- 4" (100mm) dw-link® suspension design with position-sensitive anti-squat makes for the most efficient pedaling and best performing 29er race/trail bike made. You pedal and it goes!
- Pivot specific, custom tuned Fox Float CTD shock technology: Increased performance and adjustment range allows riders to quickly and easily adjust for changing course or trail conditions.
- 142mm rear spacing with 12mm through axle and 160mm post mount dropouts for maximum frame stiffness.
- Double row bearing carbon/alloy dw-link®, and high modulus carbon rocker with Enduro cartridge bearings add to the Mach 429's superior frames stiffness and incredible long-term durability.

LES

The Pivot LES 29 defines fast.

If you're looking for the fastest way to get from point A to point B, this is your ride. There are days when the race just demands something a little (or a lot) more rigid. We know that weight matters and that the pursuit of the win is often based on having the lightest, fastest machine possible. The LES delivers all of this and more with an ultra lightweight chassis and ride tuned stiffness that's incredibly stiff in all the right places yet still the most comfortable riding race bike ever developed. With a look and ride like no other, the LES is designed to turn heads on the trail and on the podium.

For the single speed rider, the LES 29 pulls out all the stops with our patent pending Swinger dropout system. The Swinger adjustable system allows single speed riders the simplicity of a vertical dropout design with quick click indexed adjustable chain tensioning.

Solar Orange
w/Shimano XT/XTR Pro Build

PIVOT CYCLES®

1.877.85.PIVOT www.pivotcycles.com

The Swingers quick indexing allows for a lightweight, stable and compact adjustment system allowing quick, easy gearing changes and great chain tension stability. Once you ride the LES with the Swinger system, you'll see that this is a revelation in simplicity and pure functionality for the single speed rider. For those wanting to go fast with gears or without, the new Pivot LES offers you the ultimate ultra- lightweight, go fast tool in a high performance race package like only Pivot can provide.

- Pivot's exclusive hollow box, high-compression internal molding technology allows for greater compaction and smoother internal walls resulting in a lighter, stronger, highly optimized, ride tuned frame design. This technology allows the frame to be extremely lightweight while also having a very balanced feel with a great combination of stiffness and ride quality.
- Full internal shift cable routing with under bottom bracket access port design for hassle free installation: The LES features well thought out internal cable routing that protects the cables from contamination while also being very user serviceable and easy to route which is something that cannot be said for most internal routed designs.
- Chainstay length and tire clearance: The LES features extremely short 17.1" chainstays. This in 26" wheel territory and matches the shortest chainstay lengths out there so riders have a tight handling, responsive bike along with the benefits of 29" wheels. The real magic in the LES design is that we clear some of the biggest 29er tires in the market. Go ahead and run your 2.3's or even WTB's Weirwolf 2.5. The LES has ample clearance.
- Dropouts: The LES dropouts (included with every frame) are full molded hi-mod carbon fiber featuring a 142 X 12mm through axle, post style disk brake mounts and a replaceable derailleur hanger. These cleanly integrate into the frame giving little hint that the dropouts are removable. The Swinger system provides quick, consistent, indexed chain adjustments for single speed use along with fast wheel changes and no change in brake adjustments.

LES 27.5

LES is more (or LES).

After the super successful launch of the LES 29, we are on a roll, so we decided to bring Pivot's technology and performance to the newest wheels size. For the hardtail rider waiting to convert to bigger wheels, the LES 27.5'' should fit the bill perfectly. Featuring a dedicated geared 142mm X 12mm through axle design, and more compact frame design, the LES 27.5'' takes our affinity for lightweight performance to a whole new level.

Neon Lime w/Shimano XTR Build

PIVOT CYCLES®

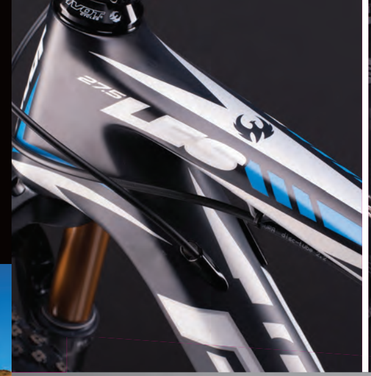

1.877.85.PIVOT www.pivotcycles.com

Getting your race ready LES under 20lbs will not be an issue. The biggest news is the small and additional X-small LES frame size that opens up the opportunity for shorter riders to get on properly fitting bikes with bigger wheels. Now you can own, ride and race the most highly optimized hardtail ever created with geometry, stand over clearance, weight, and ride tuning perfected for the smaller rider.

The LES 27.5 is a truly exciting bike that we are excited to bring to a whole new legion of Pivot riders.

- Pivot's exclusive hollow box, high-compression internal molding technology allows for greater compaction and smoother internal walls resulting in a lighter, stronger, highly optimized, ride tuned frame design. This technology allows the frame extremely lightweight while also having a really balanced feel with a great combination of stiffness and ride quality.
- Full internal shift cable routing with under bottom bracket access port design for hassle free installation: The LES 27.5" features well thought out internal cable routing that protects the cables from contamination while also being very user serviceable and easy to route, which is something that cannot be said for most internal routed designs.
- Chainstay length and tire clearance: The LES features extremely short 16.77" chainstays. This matches the shortest 26" chainstay lengths out there so riders have a tight handling, responsive bike along with the benefits of 27.5" wheels.
- Small and X-Small frame sizes bring big wheels with optimized fit, handling, and lighter weight to smaller riders while offering the maneuverability and excitement provided by the 27.5" wheels to riders of all sizes.

MACH 4

The Pivot Mach 4 is the bike that started it all.

It's the ultimate XC and marathon race bike that is at home on everything from the most demanding World Cup XC race course to your favorite trail. With a 24 hour endurance World Championship under its belt, and multiple MTBR best XC full suspension bike awards, it's easy to see why the Mach 4 has garnered such an incredible reputation. For starters, the Mach 4 is a highly optimized frame design with a stiffness to weight ratio that puts all other XC bikes to shame.

Alpine White/Blue
w/Shimano XT/XTR Pro Build

PIVOT CYCLES®

1.877.85.PIVOT www.pivotcycles.com

With race team bikes being built as light as 20 lbs (9kg) and our own XX-1 build coming in at 21.8lbs (9.8kg), you can build a Mach 4 for yourself that will crush the competition on the race course and on the scale. Featuring 4" (100mm) of the most controlled dw-link suspension travel in the sport, the Mach 4 can out climb, out sprint, and out descend any bike in its class.

With superior suspension and pedaling performance, traction and unrivaled frame stiffness, the Mach 4 is designed to take you to the top step of the podium or simply make your ride that much more fun. In either case, you will be doing everything faster aboard the Mach 4.

- dw-link® suspension design with position-sensitive anti-squat makes for the most efficient pedaling and best performing race bike on the market. With a true 4" (100mm) of travel, incredible square edge bump performance and unrivaled climbing traction, the Mach 4 is the most well rounded race bike as well.
- Pivot specific, custom tuned Fox Float CTD shock technology: Increased performance and adjustment range allows riders to quickly and easily adjust for changing course or ride conditions.
- Ultra-lightweight, with a stiffness to weight ratio that puts all other premium XC frames to shame. Race team bikes are being built as light as 20lbs (9kg)-Jason English's World Championship winning Mach 4 and we offer a 21.8 lbs (9.8kg) XX1 equipped Mach 4 as well. How will you build yours?

MACH5.7 CARBON

There's a reason the Mach 5.7 Carbon is our most popular model, its performance and capabilities have become legendary.

It's the bike the majority of us at Pivot personally own and it's the bike that can take you anywhere and allow you to ride just about anything. With 5.7(145mm) of dw-link suspended travel in a lightweight and incredibly efficient Pivot carbon chassis, the Mach 5.7 Carbon adds a higher level of enjoyment to every ride. It's a rare breed of bike that truly can win an XC race today and an enduro tomorrow.

One of the keys to this is the dw-link's incredible anti-squat technology. We can run more travel with lower bottom bracket heights and slacker angles for performance that even rivals that of more dedicated gravity bikes on the descents.

Natural Carbon/Green w/Shimano XT/XTR Pro Build
(Shown with optional KS LEV dropper post)

PIVOT CYCLES®

1.877.85.PIVOT www.pivotcycles.com

The 5.7 Carbon provides more stable handling and supreme confidence in technical riding while the dw-link's patented position sensitive anti-squat keeps the bottom bracket from lowering (squatting) under power and the head tube from slacking on climbs, making for a precise and agile climbing machine.

Applying our ground breaking composite technology to the best performing trail bike made, we've developed a bike that is lighter, stronger and stiffer than anything that's come before it. The Mach 5.7 Carbon will leave your friends with plenty of bike envy, while you'll have a blast leaving them behind!

- Pivot exclusive hollow box, high-compression internal molding technology allows for greater compaction and smoother internal walls resulting in a lighter, stronger, highly optimized frame design with the best stiffness to weight ratio in the class.
- 5.7"(145mm) dw-link® suspension with position sensitive anti-squat allows us to achieve the stable handling and increased cornering benefits of a lower bottom bracket with more travel, all with better pedaling efficiency and a plusher feel.
- Pivot specific, custom tuned Fox Float CTD shock technology: Increased performance and adjustment range allows riders to quickly and easily adjust for changing course or ride conditions.
- Under top tube internal shift cable routing with clean disk brake and dropper seat post routing.
- Rubberized leather chainstay, inner seat stay, and down tube protectors for a quiet ride and higher impact resistance.

MACH5.7

This is the bike everyone's been chasing and the bike that redefined the trail bike category.

The Mach 5.7's lightweight and incredibly efficient 5.7'' (145mm) of dw-link suspension and ultra-stable and precise frame geometry allows you to race Downieville today and the 24 hour World Championships tomorrow. It's a bike that strikes the perfect balance for climbing and descending.

Anodized Cobalt Blue w/Shimano XT Build

PIVOT CYCLES®

1.877.85.PIVOT www.pivotcycles.com

It pedals with incredible efficiency, finds traction where there's seemingly no traction to be found, and descends things that bikes with similar travel can't touch. The Mach 5.7 lives for the best trails in the world, from our own National Trail in Phoenix to Moab's Porcupine Rim or Colorado's Monarch Crest trail, and all your personal favorites as well.

The Mach 5.7 comes alive at speed, holding its line through corners, powering up climbs and gobbling up square-edge bumps, while always having a little extra in reserve for the truly big hits and truly big smiles. The Mach 5.7 defines and delivers on what the ultimate mountain bike should be.

- Optimized lightweight aluminum frame design: Only 5.6lbs with shock!
- 5.7" (145mm) of dw-link® suspension travel with position sensitive anti-squat allows us to achieve the stable handling and increased cornering benefits of a lower bottom bracket with more travel, all with better pedaling efficiency and a plusher feel.
- Pivot specific, custom valved Fox CTD shock technology featuring increased rider tunability and incredible small bump sensitivity.
- 142mm rear spacing with 12mm through axle and 160mm post mount dropouts for maximum frame stiffness.
- Double row bearing carbon/alloy dw-link®, and high modulus carbon rocker with Enduro cartridge bearings add to the Mach 5.7's superior frames stiffness and incredible long-term durability.

FIREBIRD 27.5

Whether you're sending it in Whistler, gunning for the overall in Downieville or pinning 30-minute descents on a 6-hour epic through the Rockies, the Firebird 27.5 has your back.

The Firebird has always been revered for its unique combination of climbing traction, acceleration, and descending capabilities. The new Firebird 27.5-inch takes everything that's great about the original and makes it better. Within our line of very versatile bikes it stands out because it truly rewards and inspires confidence for an aggressive rider.

Alpine White/Red w/Shimano XT Pro Build

PIVOT CYCLES®

1.877.85.PIVOT www.pivotcycles.com

To make the best even better, the head tube angle has been slackened, and the low BB height maintained to complement the Firebird's already best-in-class handling.

The Firebird 27.5 continues the tradition of providing riders with the confidence, capability and performance to excel across a wide range of terrain with a tendency towards tackling the most extreme trails. With the new Firebird come new possibilities, higher speeds and record-breaking performance in extreme enduro racing, park and gravity riding or the occasional DH race. The spanking new Firebird 27.5…now with more BRAAP! We can talk all day about how rad it is, but riding is believing.

- 6.6" (167mm) rear travel dw-link suspension design with rearward wheel travel path, incredible square edged bump performance, and unparalleled pedaling efficiency.
- Pivot specific, custom valved Fox Float or Float X CTD Kashima coated shock technology featuring increased rider tunability and incredible small bump sensitivity.
- Full 1.5 head tube with custom Pivot angled headset design optimizing the Firebird 27.5 as an ultimate Extreme Enduro machine.
- Patented Pivot floating front derailleur mount keeps the chain in the sweet spot of the derailleur for better chain retention. Combined with our custom ISCG 05 mounted MRP LRP 2X chain guide, our floating front derailleur mount creates perfect shifting performance and worry-free chain retention, even the roughest conditions.
- 142mm rear spacing with 12mm through axle and 160mm post mount dropouts. Why? Maximum Frame Stiffness.

M4X

It's hard to put into words the true capabilities of the M4X.

It was designed to be the ultimate slalom-4X-short travel dirt jump bike, but it has turned out to be so much more. Sure, it rails berms like nothing else on the planet, but the characteristics that make it flow through corners, remain composed in the air and take massive landings, also make it an incredibly fun trail bike. It's exhilarating to be shredding a technical trail on an M4X with its razor sharp, accurate handling and heroic "flickability" that just can't be matched elsewhere.

The M4X is the do-it-all perfect bike for dirt jumps, slalom, pump track and technical trails. We've combined 4" (100mm) of dw-link tuned suspension' Pivot proven frame stiffness and perfect slalom geometry to create the M4X:
A machine that delivers pure gravity delight!

Night Black w/Pivot Team Neon Lime decal kit

POINT

From the jump line to the pump track or even tearing it up at your local skate park, it's always great to have a bike like the Point in your stable.

The Point was developed with some of the best riders in the world and like all Pivot bikes, brings a higher level of performance to the party. We feel it's quite possibly the best dirt jump/park bike ever made. We know that's a strong statement, but after developing the Point with Kyle Strait in 2010 and then winning this year's pro dirt jump competition at the Santa Cruz Mountain bike festival under Jeff Herbertson, our claims are well founded.

The Point is built from the highest grade DMR chromoly steel with perfectly tuned geometry and feel. Its roomy cockpit, combined with super short chainstays, ISCG 05 mounts, interchangeable dropout and a 1.5" tapered head tube make for a bike that provides go-big confidence in all situations. The Point feels incredibly solid with a snappy liveliness that inspires confidence and an incredibly high fun factor. Whether you're hitting the local pump track or going for the best trick win at Crank Works, the Pivot Point is the bike you need to own.

Night Black w/Cyan Blue

1.877.85.PIVOT www.pivotcycles.com

VAULT

There's a lot of excitement around this project at Pivot.

The Vault features all the technology of our Pivot LES model to create the ultimate cross and gravel crushing design. It features new school cyclocross geometry with a lower bottom bracket height, slightly shorter chain stays and an overall fit and finish that will make a Pivot fan out of even the most diehard traditional cross bike fans. The Vault has it all! We started with a clean slate to design the most highly optimized, race tuned cyclocross bike ever created.

Natural Carbon w/Neon Lime w/Shimano Ultegra 11/TRP HYRD Hydraulic/Stan's Build

PIVOT CYCLES

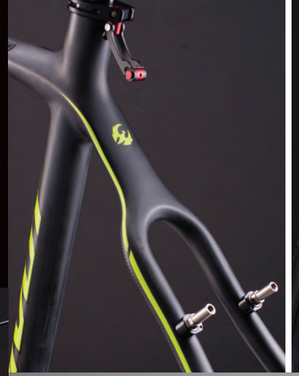

1.877.85.PIVOT www.pivotcycles.com

Out of the gate the Vault was designed with a focus on disc brake optimization, making sure the Vault would be the ultimate disc brake cross bike. However, we did not stop there. We understand that hardcore cross racers still desire to run a traditional cantilever brake set up in certain racing applications. Because of this, the Vault features full cantilever capabilities with recessed (hidden) threaded inserts in the seat stays and fork, and dropouts that convert from 135mm disc brake spacing back to 130mm road spacing.

Whether you're new to cross racing, looking to enter your first gravel race or a seasoned veteran, the Vault sets a higher bar for ride, style and tuned performance and redefines what is possible in the world of cyclocross and gravel racing.

- Internal cable routing adapts easily to either electronic or cable actuated shift systems. While the stealthy internal top tube brake routing can be totally disguised in disc brake form or cleanly hidden out of the way with cantilever brakes making portaging your bike a clean, snag-free affair.
- The Vault's 1.5 inch tapered steerer fork with oversize crown optimizes stiffness, increases steering precision, provides great mud clearance while eliminating brake chatter and can be used with either cantilever or disc brakes.
- The Vault frame features the BB386EVO bottom bracket system (designed by our own Chris Cocalis). This maximum size BB greatly increases torsional rigidity and strength and improves power transfer for a more efficient ride while also providing for more tire clearance to clear the widest rims on the market.
- The Vault converts seamlessly from cantilever to disc with our innovative and clean removable brake post system, while the Vault's carbon rear dropouts incorporate a dual insert system which allows you to easily convert the dropouts between 130mm and 135mm spacing for use with either standard road or disc brake specific wheels designs.
