...But evolution can't explain everything!

The Tioga Avenger Oversize Steering System. It's built to survive.

An awesome new beast is stalking MTBs along trails everywhere. It's lean. It's tough. It's virtually indestructible. But it didn't just evolve. The Avenger OS System is the latest invention from Tioga

The forks, stems and headtubes of the Avenger OS System have all been oversized for increased strength and rigidity with reduced wall thicknesses to save weight. The Oversize headset allows a larger threading surface to impede loosening, and is made remarkably thinner and lighter by using durable high-grade Duraluminum 2014 T6 alloy. A CrMo ball race is incorporated for optimum strength and larger ball retainers with more bearings to distribute the load. These tougher components reduce wear to a minimum, even under the most rugged conditions.

Put the Avenger in a wild setting, and watch out! Jam through the corners and feel how much better it grabs your line. Pump the front brakes. No flex, just fully modulated braking action. It's gonna make the competition extinct.

But don't be afraid, this beast is easy to tame. Very comfortable and completely predictable. The Avenger smoothly responds to every command. On any surface, at any speed, the Avenger is firm, stable and totally in control. Go ahead, put some wildlife back into your ride. The Avenger Oversize steering system from Tioga. What survival of the fittest is all about.

TIOGA AVENGER OVERSIZE

Tioga® recommends that you ride with care, and only on approved trails.

Always wear a helmet and other appropriate safety equipment.
