glossary			
standover	SO	"	The vertical distance from the ground to the point on the top tube where you straddle the bike.
effective top tube	TT	"	The horizontal measure from the center of the headset to the center of the seatpost. The most important measurement when buying a bike, because it cannot be changed.
cockpit length	CP	"	The horizontal measure from the center of the handlebar to the center of the seatpost. This is where you spend your time. (The next two measurements show how it can be adjusted.)
minimum cockpit	minCP	"	The shortest the cockpit can be made by changing the stem to the shortest one available.
maximum cockpit	maxCP	"	The longest the cockpit can be made by changing the stem to one which is 30mm longer than original: The maximum recommended to retain optimum handling.
stem length	SL	mm	The original stem: measured from the center of the steerer tube to the center of the handlebar.
crank length	CL	mm	The distance from the center of the bottom bracket to the center of the pedal axle. A rider with long legs can benefit from longer cranks.
headtube length	HTL	mm	The distance between the upper and lower headset. Affects how high your handlebar is relative to your saddle.
head angle	HA	°	The angle of headtube to the ground. Tailored to optimize steering precision on each frame size.
seattube angle	STA	°	The angle of seattube to the ground. Tailored to optimize power transmission on each frame size.
chainstay length	CSL	mm	The distance from the center of the bottom bracket to the center on the rear axle.
bottom bracket height	BBH	mm	The vertical distance from the center of the bottom bracket to the ground. Expresses clearance of the frame over obstacles.
bottom bracket drop	BBD	mm	The vertical distance the bottom bracket is below an imaginary horizontal line drawn through the axles. The greater the bottom bracket drop, the lower the rider's center of gravity.
wheelbase	WB	mm	The distance between the axles. Tailored to optimize weight distribution on each frame size.
center to top	CT	"	The distance from the center of the bottom bracket to the top of the seat tube. Because some people still feel they need to know.
inseam range	I	"	If your inseam is within this range, this size of bike should fit you.
