INTRODUCING THE LATEST ADDITION TO LANCE'S TOUR ARSENAL.

A true revolution in bike design: the Madone™ 5.9. Lance himself challenged us to create our fastest, most streamlined frame ever. We met his challenge by combining the proven geometry and ride characteristics of the 5900 Superlight with our Time Trial aerodynamics technology.

The end result is the closest we've come to perfection on two wheels: a Trek OCLV™ Carbon bike that's impressively light, yet maximizes aerodynamic performance. In fact, wind tunnel tests showed that the Madone 5.9 saves a full minute in a 200k stage. In a race decided by seconds, that's enough to separate contenders from champions.

But we knew we'd truly succeeded when Lance returned from his first test ride and immediately asked for two more. Then he named it in honor of the climb he uses to test himself before each Tour, the Col De Madone.

Satin Silver

The aero top tube and down tube effortlessly direct air around the frame.

A contoured seat tube minimizes aerodynamic drag from the rear wheel.

Our proprietary "A-Stay" design remains stiff during sprints and climbs.

Madone™ 5.9
Frame OCLV 110 Carbon
Fork Bontrager Race XXX Lite
Wheelset Bontrager Race X Lite
Crank Shimano Dura-Ace 53/39
Rear derailleur Shimano Dura-Ace
Sizes 50, 52, 54, 56, 58, 60, 62cm

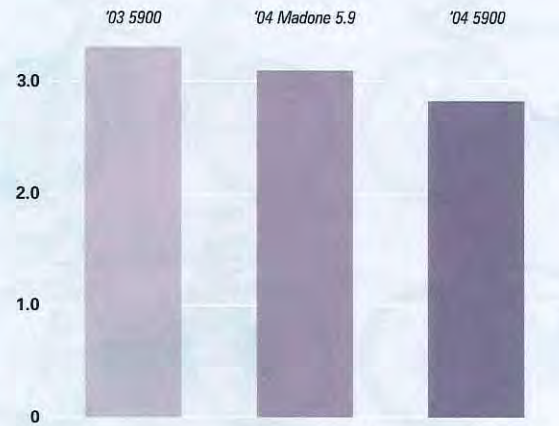

ANY LIGHTER AND THEY WOULDN'T ALLOW IT IN THE TOUR.

Working with Lance Armstrong means constantly looking for ways to shed a few ounces and gain a few seconds. Our goal for the 2003 Tour de France: to deliver an arsenal of bikes even lighter and faster than our previous Tour winners.

To improve the 5900, we manipulated the lugs and tubes to minimize weight without compromising the bike's stiffness or strength. We were proud to deliver a frame that tipped the scales at just 1000 grams — shaving over 100 grams off the previous year's model!

With the additional weight savings of the all-new Bontrager Race XXX Lite fork, the new 5900 Superlight lives up to its name more than ever before.

2003 VS. 2004 SUPERLIGHT WEIGHT SAVINGS

'03 5900	'04 Madone 5.9	'04 5900
TOTAL=3.28 lbs (1490 g)	**TOTAL**=3.17 lbs (1439 g)	**TOTAL**=2.96 lbs (1339 g)
FRAME 2.52 lbs (1145 g) **FORK** .76 lbs (345 g)	**FRAME** 2.43 lbs (1100 g) **FORK** .75 lbs (339 g)	**FRAME** 2.21 lbs (1000 g) **FORK** .75 lbs (339 g)

All weights based on an unpainted 58cm frame (Lance's size).

HIGH PERFORMANCE

The world's lightest stock frames that meet the demands of Lance Armstrong and the USPS Team.

Madone™ 5.9
5900® Superlight™
5500®
5200™

THE BIKES LANCE AND THE USPS TEAM TRUST.

Our proprietary superlight Trek OCLV™ Carbon creates the strongest, fastest and most durable stock frame out there. Because Trek OCLV Carbon is directional, we can shape it to soak up vibration in one area and be stiff for better power transfer in another. To complete the performance package we've included an aerodynamically designed OCLV carbon fork. The result is a ride with the speed, agility and precision a Tour champion demands.

PART OCLV™ CARBON. PART ZR 9000 ALLOY.™ ALL PERFORMANCE.

PERFORMANCE

An elite road frame for serious racing or light touring.

2300™
2200™
2100™

The racing bike that keeps pace with what racers want. Crafted from premium materials like ZR 9000 Alloy™ and Trek OCLV™ Carbon, this racer uses the same Pro Race geometry found in the champion USPS Team bikes. Sleek aerodynamics and lateral rigidity allow for more transfer of power on climbs. Not to mention a fast descent and a quick snap to attention when you're rushing for the finish line.

CYCLOCROSS

This racer's equally at home on morning commutes and muddy trails.

XO 1™

An intense bike for intense situations. Trek's true cross racing bike responds quickly to technical terrain — from potholes and car doors to roots and mud. The frame's higher bottom bracket gets you over obstacles, while the wheelbase, longer than regular road bikes, ensures off-road stability. Increased tire clearance helps eliminate speed-robbing mud clogs, and accommodates fenders and wider tires for winter training, commuting or touring. An oversized downtube makes the entire frame stiffer and stronger. The special cross geometry offers plenty of shoulder room, whether chasing up run-ups or a flight of stairs.

THE WIND WON'T KNOW WHAT HIT IT.

TIME TRIAL

Designed to help you ace the test against the clock.

Team Time Trial™

In a time trial, drafting and team tactics cease to apply. The time trial bike combines aggressive racing geometry with Formula One-inspired aerodynamics to give you the edge you need. A steeper seat angle puts you in the optimal position to crank out redline-level power and speed. The streamlined frame, wheels and components help you keep a low profile in the wind, so you can rocket straight to the finish.

TRIATHLON

Equinox: for a perfect day in Kona.

Equinox™ 11
Equinox™ 9
Equinox™ 7

Start with a new Bontrager seatpost that lets you adjust the effective seat tube angle from 74° to 78,° so you can achieve the ideal riding position for your event. Add the new Bontrager Aero TT fork, a combination of OCLV™ Carbon, wind-tunnel testing, and Tour-proven performance. Finish with key aero features in all the right places, and you've got Equinox, a triathlon bike wired for performance.

A BIKE YOU'LL BOTH LOVE TO RIDE.

TANDEM

Designed just for that special bike club of two.

T 2000™
T 1000™
T 900™

We put our years of making great bikes to work making the best riding, best fitting tandems on the market. Each riding position on the light aluminum frame replicates the position found on a Trek single rider bike for a comfortable, familiar fit and feel — whether you're the stoker or captain. Adjustable components further ensure an equally enjoyable experience. Whether you're looking for an aggressive, race-worthy ride or a relaxing cruise down the bike path, Trek has a tandem that's built for the both of you.

WORLD CUP WINNING TECHNOLOGY.

XC FULL SUSPENSION PERFORMANCE

Fuel®: The full-suspension racer that's lighter than most hardtails.

Fuel 100™
Fuel 98™
Fuel 95™
Fuel 90™

ENERGY — Get 3" of tunable travel with Fuel's fully independent rear suspension system. A stiff triangulated Rockerlink™ transfers force from the terrain directly to the tunable rear air shock. Simply put, you keep more energy for yourself and give less to the trail. LIGHT — Engineered from Trek's proprietary OCLV™ Carbon and ZR 9000,™ creating frames that are lighter than most hardtails.

An open frame design makes it easy to shoulder on portages. Includes room to mount up to three water bottles. POWER — A bi-axial down tube gives Fuel a stiffer bottom bracket for improved power transfer and handling. Ready for ignition...

Roland Green rode Fuel to victory in the World Cup. No wonder. Fuel's Rockerlink and unique full suspension design create a ride that's light, stiff, precise, and incredibly fast. With a Pro Race geometry tuned for climbing, descending and sprinting like a champion.

The Fuel Rockerlink™ transfers force from the terrain directly to the rear shock – without flex.

THE SECRET BEHIND FUEL

- *The optimized pivot location helps Fuel respond like a hardtail by limiting pedal-induced bobbing.*
- *The stiff, oversized rear triangle eliminates side-to-side play for a solid, efficient ride.*
- *The bi-axial downtube adds strength only where it's needed – keeping the frame light and fast.*
- *The open frame design is easy to shoulder during portages. There's even room for up to three water bottles (on select sizes).*

FREERIDE TRAINING CAMPS

Whistler, British Columbia

"As someone who helped pioneer freeriding, I want to give others a chance to find their own way."

ANDREW SHANDRO

Two-time World Cup downhill mountain bike champion. Four-time winner of the Canadian National downhill. Extreme racing video star. Dad. When people think of downhill racing in Canada, the name Andrew Shandro comes to mind.

Andrew's also decided to up the ante of his already impressive resume by becoming, of all things, a camp counselor. Kids from all over North America attend Andrew's week-long Freeride camp. From video analysis to celebrity instructors, campers get the 411 on improving their skills and on life in general. According to Andrew, it's his way of "giving back." Plus, he's supposed to have one killer barbecue at the end of every week.

Where do we sign up?

YOU MULTI-TASK, WHY SHOULDN'T YOUR BIKE?

HYBRID PERFORMANCE

A performance lightweight frame that combines the comfort of a mountain bike and the speed of a road bike.

7700™
7700 FX™
7500 FX™
7500™

Comfortable like a mountain bike. Light and fast like a road bike. These high performance hybrids fit the very definition of versatility. Whether you use it to commute to work, get around on the weekends, or keep yourself in shape. The balanced frame geometry gives you a spirited, responsive ride that's fun and maneuverable at high speeds. Quality, performance components ensure the ride is stable and smooth. Take the long way home.
