Eight Is Never Enough

It's More Than Luck

You don't win an unprecedented eight of the last nine Tours de France without working harder than the competition. Sure there's some luck involved, but every true champion knows that you make your own luck by coming to the starting line more prepared and better equipped than the competition.

Keep Moving Forward

We know that the best bike, or the best rider, doesn't always win. But you always bring your A-game, no matter what's on the line. That's why, despite our unmatched success in the world's toughest race, we've never been spoiled by victory or lulled into complacency—not even after eight overall Tour championships. Because as much as we like winning, it's our love for cycling that drives us to continue to push bicycle technology and design to the limit. It's a passion for excellence that goes into every bike we make, not just the ones ridden to victory at the Tour de France.

A Legacy For All

Whether it's for proven pros like George and Eki who helped make Lance legendary, team leaders like Levi and Alberto who are working with Johan to write the next great chapter in Tour history, or the lone rider who craves the rush that comes from hammering the hills and carving the turns, Trek's 2008 road collection is ready to take you farther and faster than you ever thought possible.

2008 Trek Road Bikes

Madone 7

Forget everything you thought you knew about what a performance road bike should be. The all-new Madone has arrived. Everything else is history.

2/1 Series 21

Built with the same ProTour geometry as the Madone for serious performance at an unbeatable value.

TT/TRI 27

Extensively windtunnel tested for superior aerodynamics and maximum speed.

Pilot 37

Top-notch frame materials for sporty performance to both enthusiasts and racers who desire a more natural riding position.

Commuting 41

Legendary touring or commuting bikes built all-weather tough for long haul expeditions or the urban jungle.

Cyclocross / Track 45

A no-holds-barred racing bike bred for the demanding conditions of cyclocross.

WSD 49

Frames are designed to balance a woman's weight more evenly between hips and hands, putting her in a more natural and comfortable riding position.

P R O J E C T

The Ultimate Custom Bike Program

Trek's Project One custom bike program puts you in the designer's seat. Build your dream bike from the ground up. Choose your paint scheme and color combination to express your personal style. Hand-pick the perfect spec from our collection of performance parts. Add custom accents and details to make it as unique as your signature. You're not like everyone else, so why should your bike be? Start building now at **projectone.trekbikes.com**

Madone

The all-new Madone has arrived. Forget everything you thought you knew about what a performance road bike should be. Starting with a blank slate—no constraints and no compromises—we focused on creating a superior ride with superior performance—refined to the last detail. Compared to it, everything else is history.

Only From Trek

Beyond the Podium

By the time Lance Armstrong stepped off cycling's center stage in 2005, Trek was already preparing to transform the Madone® beyond an elite racing machine to the ultimate performance experience. For almost two years, an army of designers, engineers, physicists, carbon producers, bike shop owners, project managers, average riders—and a few above average riders named George, Levi, Popo and Lance—scrutinized every detail of the all-new Madone in relentless pursuit of the ultimate ride.

No Constraints

The all-new Madone began when Trek's Advanced Concept Group (ACG) challenged itself to create the finest all-day comfortable, high-performance bike. There would be a blank slate—no givens, no constraints. Anything and everything could be questioned. The only requirement: Make no compromises between ride quality, weight and everyday usability. The result is as stunning as it is impressive: a tangible testament to our relentless commitment to perfectly blended performance and a dialed-in ride quality.

The OCLV Carbon Line-up

Trek offers three different OCLV Carbon frames, each designed to give riders the right balance of performance and value. All are handmade in the USA using our patented OCLV Carbon process.

OCLV Red™ Trek's highest-performance carbon fiber, OCLV Red uses a significant percentage of high modulus carbon fiber arranged according to our most complex lay-up schedules.

OCLV Black™ Trek's high-performance carbon fiber, OCLV Black employs intermediate modulus carbon fiber and our time-tested lay-up schedules.

OCLV White™ Trek's value-oriented performance carbon fiber, OCLV White uses predominantly standard modulus carbon fiber for outstanding value.

More information at bikes.com/madone

A Fitting Performance

Centered On Performance

At the very center of the all-new Madone's performance is our ControlCore™ technology, which utilizes a size-specific seat lug / top tube section that gets larger in diameter and stiffens as frame size increases. Creating a direct link from the top tube to the seatstay, ControlCore technology allows Trek engineers to tune lateral flex to provide outstanding steering and rear triangle precision. As impressive as ControlCore is, it's only one of the many technologically advanced parts that make up the collective sum of this all-new Madone.

1 All The Strength Without The Weight. The all-new Madone E2™ oversized 1½" lower steer tube takes advantage of carbon's inherent "straight line" strength, allowing us to create forks that are not only significantly lighter (up to 90g lighter) than the previous, conventional design, but also stronger.

2 Unparalleled Drivetrain Efficiency. The all-new Madone uses Net Molding Carbon technology to create Precision Fit Sockets™ that allow the bottom bracket bearings to rest directly in the frame itself. The result is an exclusive 90mm wide bottom bracket that provides a 48% increase in lateral down tube stiffness at the bottom bracket and saves 40 grams compared to traditional designs.

3 A Total Performance System. The integrated headset, seatmast, integrated bottom bracket, and the E2 fork all contribute to a total fuselage system that performs better and weighs less. Compared to last year's Madone (w/seatpost, headset, and bottom bracket installed), this year's comparable Madone 5.2 fuselage is over 250g, or a half-pound, lighter.

4 Focused On Comfort. The all-new Madone's seatmast design achieves a 25% weight reduction compared to a standard carbon seatpost, while also allowing the seat tube to flex in a more natural way, improving vertical compliance by 39% compared to last year's Madone.

Designed To Fit

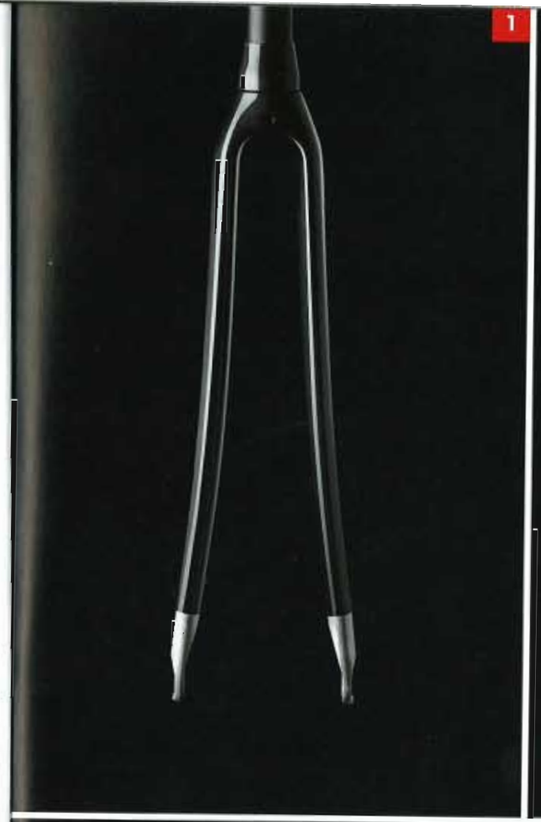

In the past, how a bike fit was tied directly to its geometry. If you wanted a responsive, performance-oriented bike, you were forced into an aggressive fit. For a more natural riding position, the trade-off was a slower-handling geometry. That thinking changes with the all-new Madone, which offers riders a choice of three fit options, all sharing the same ProTour-proven geometry. Now you can have the performance you crave with the riding position that best fits your needs.

Pro Fit. The racer's choice; same aggressive fit as the original Madone with a proven Tour de France and Giro d'Italia championship legacy.

Performance Fit. For racers and enthusiasts alike; Same ProTour geometry as Pro Fit, but with a 30mm taller head tube for a higher hand position.

WSD Fit. Designed specifically for women, the WSD Fit Madone is based on the Performance Fit, but fine-tuned to address a woman's unique body structure.

TT/Tri

Extensively windtunnel tested for superior aerodynamics and maximum speed, the wind-cheating Equinox family offers a stable, balanced ride so you can concentrate on what matters most: going fast.

Fast As Fast Can Be

You Versus The Wind

Whether it's the "race of truth" or the second-leg of a triathlon, an aerodynamically efficient bike can make the difference between shattering the clock and shattering yourself. Enter the Trek Equinox, a bike designed with a single mission: deliver maximum speed by letting you slip right through the wind's clutching hands.

It's In The Details

The formula for triathlon and time trial bikes seems to be well established: Wide, airfoil tubes. A rear wheel tucked up close to the seat tube. It's a formula that usually results in a faster bike. But it's not as fast as you can be. To get really fast, we're talking TdF and Ironman victory fast, you've gotta do your homework, which means plenty of time in the wind tunnel, and plenty of time paying attention to the details. As the wind tunnel reveals, the biggest aerodynamic gains are often in the smallest details. And it's in the details that the Equinox excels. Slipstream internal cable routing. A lowered down tube that presents a virtual continuous surface from the front wheel to the frame. A fork crown that flows seamlessly into the frame. All details that shed precious grams of drag and add up to the difference between faster and fastest.

Under Control

After hours in the saddle, or when you're racing yourself cross-eyed to beat the clock, the last thing you want is a twitchy ride that refuses to settle down. So we've worked hard to make the Equinox stable and balanced when riding in the aero position. Riding at the absolute edge of the physical limit is something that pro racer Levi Leipheimer knows a thing or two about, and he summed up the Equinox's ride nicely: "The TTX is really comfortable and stable and you can relax. You don't have to give it a lot of input, which is nice." Thanks to the Equinox's unparalleled ride quality, riders can concentrate on going fast, instead of worrying about what the bike might do next.

Designed To Perform

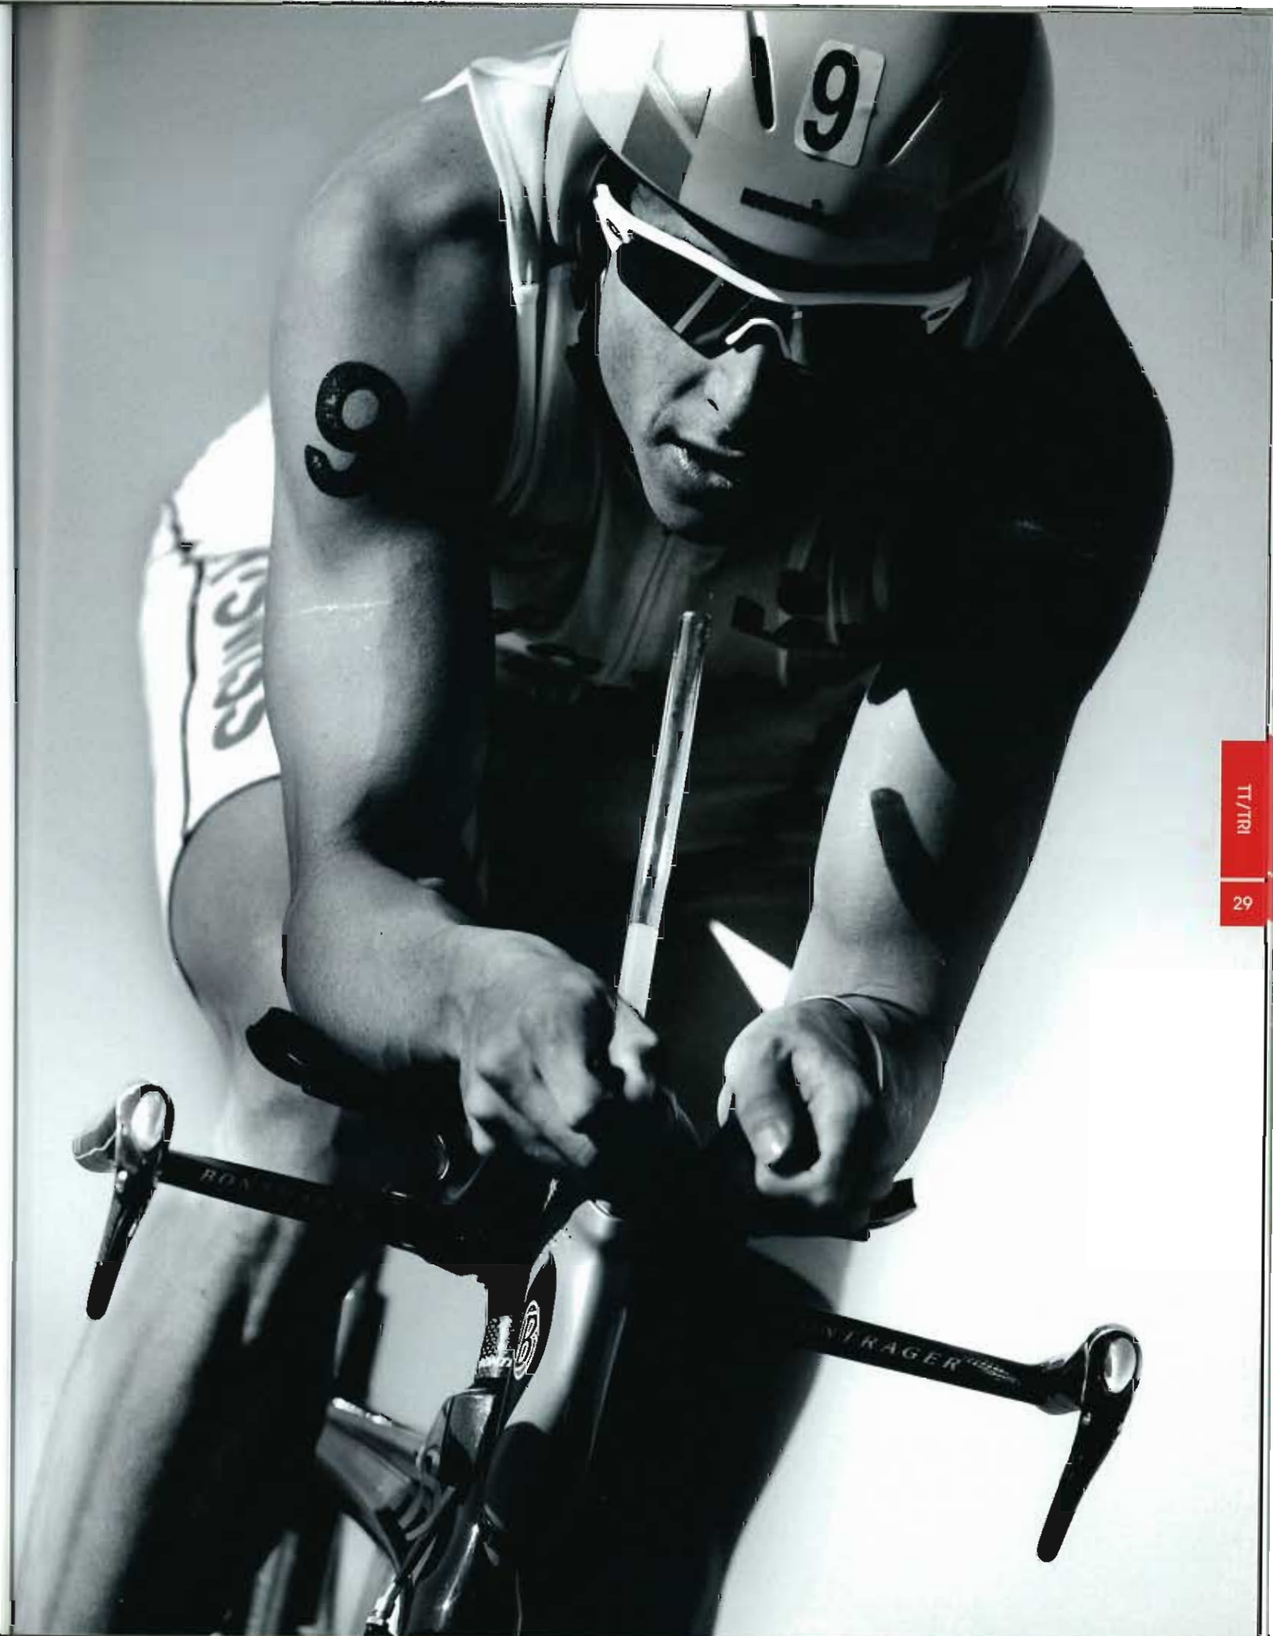

Top Tube Shape The Equinox's uniquely shaped top tube is critical to the frame's performance and handling. As aerodynamically efficient as a traditional airfoil tube, but with significantly more structural stiffness, the Equinox's top tube provides stable handling and precise steering without incurring an aerodynamic penalty. And because of the improved stiffness of the structural design itself, we can use less material, for a lighter, yet stiffer frame.

Lowered Down Tube A lowered down tube reduces the gap to the front wheel, presenting the wind with a virtual continuous surface from front wheel to down tube, shedding precious grams of aero drag from the Equinox frame.

Fork Width The fork blades of the Equinox TTX are spaced relatively wide apart to permit the air pulled along by the tire, rim, and spokes to pass freely through the fork. This wide spacing reduces aerodynamic drag by a tenth of a pound compared to narrower forks. The extra room for the churning air is evident in the wide fork crown and in the fork ends, where the dropouts are designed to carry the fork blades slightly behind the hub end of the spokes.

Continuous Surface The shoulders of the Equinox TTX fork crown are designed to flow seamlessly into the frame's down tube, reducing aero drag and delivering increased speed.

OCLV Madone frame size is measured from center of bottom bracket to virtual size mark on seat mast.
Seat tube dimension applies to non-seatmast frames only and is measured from center of bottom bracket to top of seat collar.
Head tube length for 1.2 includes external headset cups

All dimensions are in centimeters unless otherwise stated.
Some models are not available in all sizes.
*60cm size available for Equinox TTX 9.5 only.

Trek Limited Lifetime Warranty

Trek Bicycle Corporation provides each original retail purchaser of the bicycle a lifetime warranty against defects in materials and workmanship in the bicycle frame and rigid fork when purchased from an authorized Trek dealer. Trek Bicycle Corporation likewise warrants all original parts on the bicycle, excluding suspension forks and rear shock absorbers, for a period of one year from the date of purchase. Suspension forks and rear shock absorbers shall be covered by the stated warranty of their original manufacturers. Paint and decals are warranted for one year. This warranty is expressly limited to the repair or replacement of a defective frame, fork, or defective part and is the sole remedy of the warranty. This warranty applies only to the original owner and is not transferable. Claims under this warranty must be made through an authorized Trek dealer. Proof of purchase is required. A warranty registration card must be completed and received by the Trek Bicycle Corporation before a warranty claim may be processed. This warranty covers bicycles and components outside the United States only if purchased through an authorized international Trek distributor or Trek dealer within the country of purchase. The warranty does not cover normal wear and tear, improper assembly or follow-up maintenance, installation of parts or accessories not originally intended or compatible with the bicycle as sold, damage or failure due to accident, misuse or neglect, or modification of the frame, fork or components.

Trek Bicycle Corporation shall not be responsible for incidental or consequential damages. Some states do not allow the exclusion of incidental or consequential damages, so the above exclusion may not apply to you. This warranty gives the consumer specific legal rights, and those rights may vary from place to place. This warranty does not affect the statutory rights of the consumer.

All photos, illustrations, colors, weights, and specifications contained in this catalog are based on the latest production information at the time of publication. Trek reserves the right to make changes at any time, without notice, in colors, materials, equipment, specifications and models. Any variations in colors shown may be due to the reproductive variations of the printing process. Photos may include non-U.S. equipment. Some models may be shown with optional equipment. Off road bike weights based on medium or 18 inch frame size. Road bike weights based on 56cm frame size.

All Trek bikes are sold exclusively through our network of Authorized Dealers who we entrust with professional assembly and service of your bicycle. Trek extends a Lifetime Warranty on every frame.

WE PRINT OUR CATALOGS ON ONLY FOREST STEWARDSHIP COUNCIL (FSC) CERTIFIED PAPER

FSC certification ensures that the paper in our catalogs contains fiber from well-managed and responsibly harvested forests. The goal is to shift the market to eliminate habitat destruction, water pollution, and displacement of indigenous peoples. This catalog meets FSC's strict environmental standards.
