CYCLE BRAKE

in design and Efficiency

SYNCHRON

A unique brake in the famous G.B. range. In action and construction it provides centre-pull braking efficiency with the simple fitting and maintenance of a conventional side-pull brake.

Manufactured from high quality aluminium alloy forgings the two stirrups actuate on pivots located on a common back plate. When the brake is applied a stud located on the back of L/H stirrup bears on the underside of R/H stirrup, thus providing a "Synchronised" action. Springing is by a single powerful spring. Operative stirrup depth is 2"—2⅞".

Superbly styled and engineered the Superhood lever contributes to maximum braking efficiency. A superior manufacturing technique makes for improved lever fixing, and special features include the provision of a slot in the lever hood to receive the metal insert of a G.B. rubber.

Synchron Stirrups with Sport Mk. 3 levers	**45/6**	pair
Synchron Stirrups with Superhood levers	**47/6**	pair
Synchron Stirrups with quick release levers	**49/6**	pair

Lever - quick release. Alternative lever incorporating a unique automatic cable release, thus providing the brake with an extra facility. Available with Synchron Stirrups as a complete ensemble.
