CX TUBULAR

The ENVE CX disc specific carbon fiber tubular is designed for cyclocross racers looking for the ultimate in cyclocross race performance. As such, the tire bed has been developed for use with 33mm tires and is capable of withstanding frequent tire installations and removals. The shape of the tire bed has been further refined to reduce the instance of pinch flats. The ENVE CX rim is 28mm wide and 31mm deep. Because the ENVE CX is disc brake specific it does not feature a brake track and cannot be used with rim brakes. One of the great benefits of developing a rim for disc brake specific use is that the engineering team is no longer bound by the constraints caused by braking on the rim. The result is a rim that is substantially lighter and more compliant without sacrificing the strength or impact resistance of the rim. The ENVE CX tubular rims come in a 28 hole count only to maintain an optimal degree of stiffness and strength required for the frequent accelerations and decelerations that define cyclocross racing. Each ENVE CX cyclocross tubular is proudly manufactured in the USA.

Weight:	285g
DT180:	1208g
DT240:	1293g
King:	1325g
Depth:	31mm
Width	28mm
Hole Count:	28
ERD:	598mm

Key Features:

- Lightweight
- Disc brake specific design
- Improved impact resistance
- Optimized vertical compliance for cyclocross application
- Laterally stiff for confident cornering and accelerations
- Cyclocross specific tire bed
  - Designed around UCI regulation 33mm tires
  - Improved durability for frequent tire installation and removal
  - Rounded edge profile reduces potential for pinch flats
