200-2009-003	50mm Rake

Hidden hoses and wires are the name of the game when it comes to the modern bicycle and the expectations of the rider. ENVE's IN-Route System is designed to hide hoses and wires from the wind, improving the bike's aero performance with a practical and user-friendly solution. This doesn't come at the expense of limiting drivetrain options – The Road IN-Route fork is compatible with most drivetrain brands, models, and configurations on the market.
