NEW QR20 AXLE AND 12MM REAR AXLE

There is no better oversized QR system out there than the one we designed for the 44! Easy and friendly to use that you wouldn't really notice the difference between a 9 mm! We are so confident about this system that we had to redesign our 20 mm quick release too! The result is so amazing that it inspired the Marzocchi engineers for a 12 mm rear axle. The result is a consistent design line between front and rear drivetrain that shows the care in all the details. The 20 mm QR is compatible with all the 55 and 66 castings like the rear axle matches the patented 12 mm frame design standard available on the market.

2010 RC3 EVO CARTRIDGE

A real World Cup Replica should accomplish the Pro riders needs first! In the majority of the cases this wouldn't suit the average riders settings: the Pro riders compression shim stock would make the fork un rideable. With Our revolutionary RC3 open bath cartridge, the first serviceable and with an interchangeable compression shims set, accomplishes all needs. Developed with the precious help of our riders Marzocchi achieved the goal to perfectly tune the same fork for Wade Simmons or Richie Schley, Cedric Gracia or Rob J. All these riders know how to bring the bike to the limit but they all have different riding style and weights! There is no magic and no secret, It's motorcycle industry tuning procedure! It's Marzocchi style!
