LIVE IT UP!
Don't just be alive, but LIVE!

Join the best experience of riding! Few companies can boast over 60 years of experience, but Marzocchi can. Today, as it's always been, our unique blend of technological tradition, internationally respected Italian style and deep passion, keeps the evolution process going. While we are fortunate to display our successes in the various competitive disciplines, your positive riding experience is our main goal. We can only be as successful as you enjoy our products.

Founded in 1949 by the two brothers Stefano e Guglielmo Marzocchi, the company has been leading for more than 60 years in the field of projecting and producing forks and shocks.

At the end of the fifties, Marzocchi began to be recognized as one of the most important suppliers for those eminent motorcycle brands as Ducati, Mondial and Benelli. Now, as in the past, Marzocchi's products are aknowledged worldwide as the better built and more efficient.

At the end of the eighties, mountain bike field experienced a great growth and Marzocchi decided to enter with great determination into this new sector. Consumers began to ask for cushioned forks for their bikes. In response to such requirement, in 1989 Marzocchi introduced the first prototype of a cushioned fork. The market grew together with Marzocchi and in 1995 the renowned "Bomber" fork came out.

Starting from September 1st 2008, Marzocchi's suspension division is part of Tenneco, a US industrial group operating globally, with many sites and thousands employees worldwide. The competencies coming from the two companies merged up, giving birth to the Tenneco Marzocchi S.r.l.

Nowadays the company is experiencing a constant growing process, and dealing with the new challenges with the same old determination, beeing inspired by a goal: improving the quality of its products and its service.

Arriving far requires many efforts and struggles, but you are not supposed to stop once you have innovative projects and new ideas, instead, you have to stand for the challenge. For us, that means trying to reach superior perfomances which should be within the grasp of all the people using our products. Because our best performance is your emotion.

Cartridges

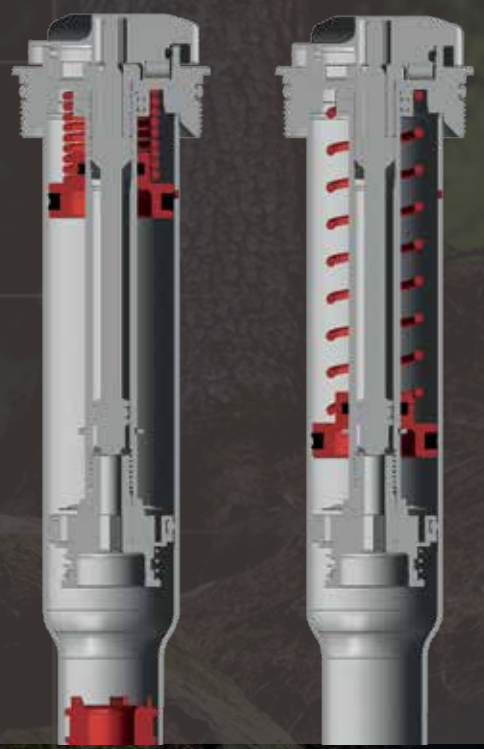

DYNAMIC BLEED CARTRIDGE: LR- CR- R

One concept – three versions.
Drawing from our experience in Motocross forks, no one else offers this kind of technology for a mountain bike: reliable, durable, virtually indestructible and yet with the buttery smoothness you have come to expect of a Marzocchi fork.
Combining the damping feeling and the reliability of the open bath cartridge with the lightweight of a closed cartridge – impossible? Not for our engineers. Thanks to the compensation port any excess oil will flow out into the lowers keeping bushings and wipers lubricated. The oil volume always remains constant at an optimum since the previously expelled oil is brought back inside.

LR (lockout and rebound)

CR (compression and rebound with interchangeable compression shims)

R (rebound)

NEW for MY 13

restyled Rebound Valve unit: new hydraulic setting with improved oil circuits
new low friction seals new CNC knob with more sensitive clicks.

TST MICRO

To ensure a fork's ideal performance, it is key to keep oil and air completely separate. We were the first to introduce a bladder system on a mountain bike cartridge; a design taken from motocross technology. The bladder can inflate to expand when the shaft goes inside without any air getting in. Slightly redesigned to reach perfection, the TST Micro is the latest step in a forward evolution of our closed cartridge hydraulic system. The red knob on the lower part of the fork leg adjusts rebound; the black top lever activates the Micro system controlling compression. The Micro adjustment located in the middle of the top left knob sets the threshold valve in order to offer maximum traction and control on any terrain and combining it with any riding style. Lockout is activated quick and easy to not hold you back from your uphill adventure.

VOLUME ADJUST

Tuning the preload, rebound and compression is not always enough. Some riders want to control the compression curve from the beginning to the end of the stroke. What they need is our exclusive Volume Adjust; the easiest way to control the second half of the compression keeping maximum control in all riding conditions without sacrificing any of the legendary plushness. All it takes is theturn of a knob and without the need of changing the oil level.

AER

Air that makes you fly. The AER system performs better than any other system on the market. Countless reviews and tests agree with us! The low pressure required keeps the seals sliding smoothly on the surface with no friction at all. A negative spring offers plushness you would expect from a coil right from the beginning of the travel. Furthermore, the fixed piston in the closed cartridge helps to reduce weight since less oil is needed in the entire system.

TRAVEL ADJUST

Derived from the tried and tested AER concept, the revolutionary hydraulic travel adjust system Switch TA is available for the 55 series (40mm) and 44 series (30mm).

SUSPENSION PRODUCTS

Highlights

GOLD RACE COATING

Gold Marzocchi Race Coating. Hard anodized, low friction race coating with teflon impregnation increases small bump sensitivity and overall durability of all sliding parts (stanchion surface, seals, bushings).

888 DIRECT MOUNT UPPER CROWN

Our DH flagship comes with a 4-bolts upper crown for direct mount on the bike and eliminates the need for a customized stem.

MATCHING CROWN

In selected models we offer the option of matching the colors of the lower legs and crown.

REMOTE LOCKOUT

Ergonomic, lightweight and fast :
the remote control allows to lock the fork compression control for a more efficient climb and a precise steering. As soon as the terrain gets rough a small click on the top lever and you can enjoy the full travel and the famous Marzocchi plush riding to fly over the rocks. Easy to assemble, the new lever is compatible with most regular shifters and levers on the market.

ROCO LITE

These XC rear shocks come with rebound adjustment and a lockout option. Superior performance in only 198g.

BLACK ROCO

Proven concept: our rear shock now comes in black.

TWENTY NINE INCH BACK IN 2000..

Mountain bike legend Gary Fisher and Marzocchi engineers worked on our very first 29" fork. Fast forward to 2011 and we can see that the mountain bike world is finally catching up to that decade old vision we had with Gary... the 29" bike rocks! Starting from the end of MY12, Marzocchi has developed an all-new 29" fork: the CORSA Superleggera 29". 100% optimized for the big wheel, this fork is super lightweight with a carbon fiber crown and steer tube and fits wider tires than any of its competitors. Many other designs are simply extensions of the 26" fork chassis but we took it a step further and developed a fork that is dedicated to the performance requirements the big wheel demands!

CARBON CROWN & TUBE

Monocoque carbon crown and 1.5 - 1 1/8" tapered steer tube on the top of the line 29" Corsa Superleggera RC offers the perfect compromise between weight and stability.

HOLLOW CROWN

To save a few more grams, Corsa Superleggera 29" comes with a hollow aluminum crown.

29" CHASSIS

The casting has been tried and proven especially for the requirements of a 29" wheel. A customized brake arch design and QR15 axle provide extra stiffness. Super lightweight starting at 1650g.

SWITCH TA

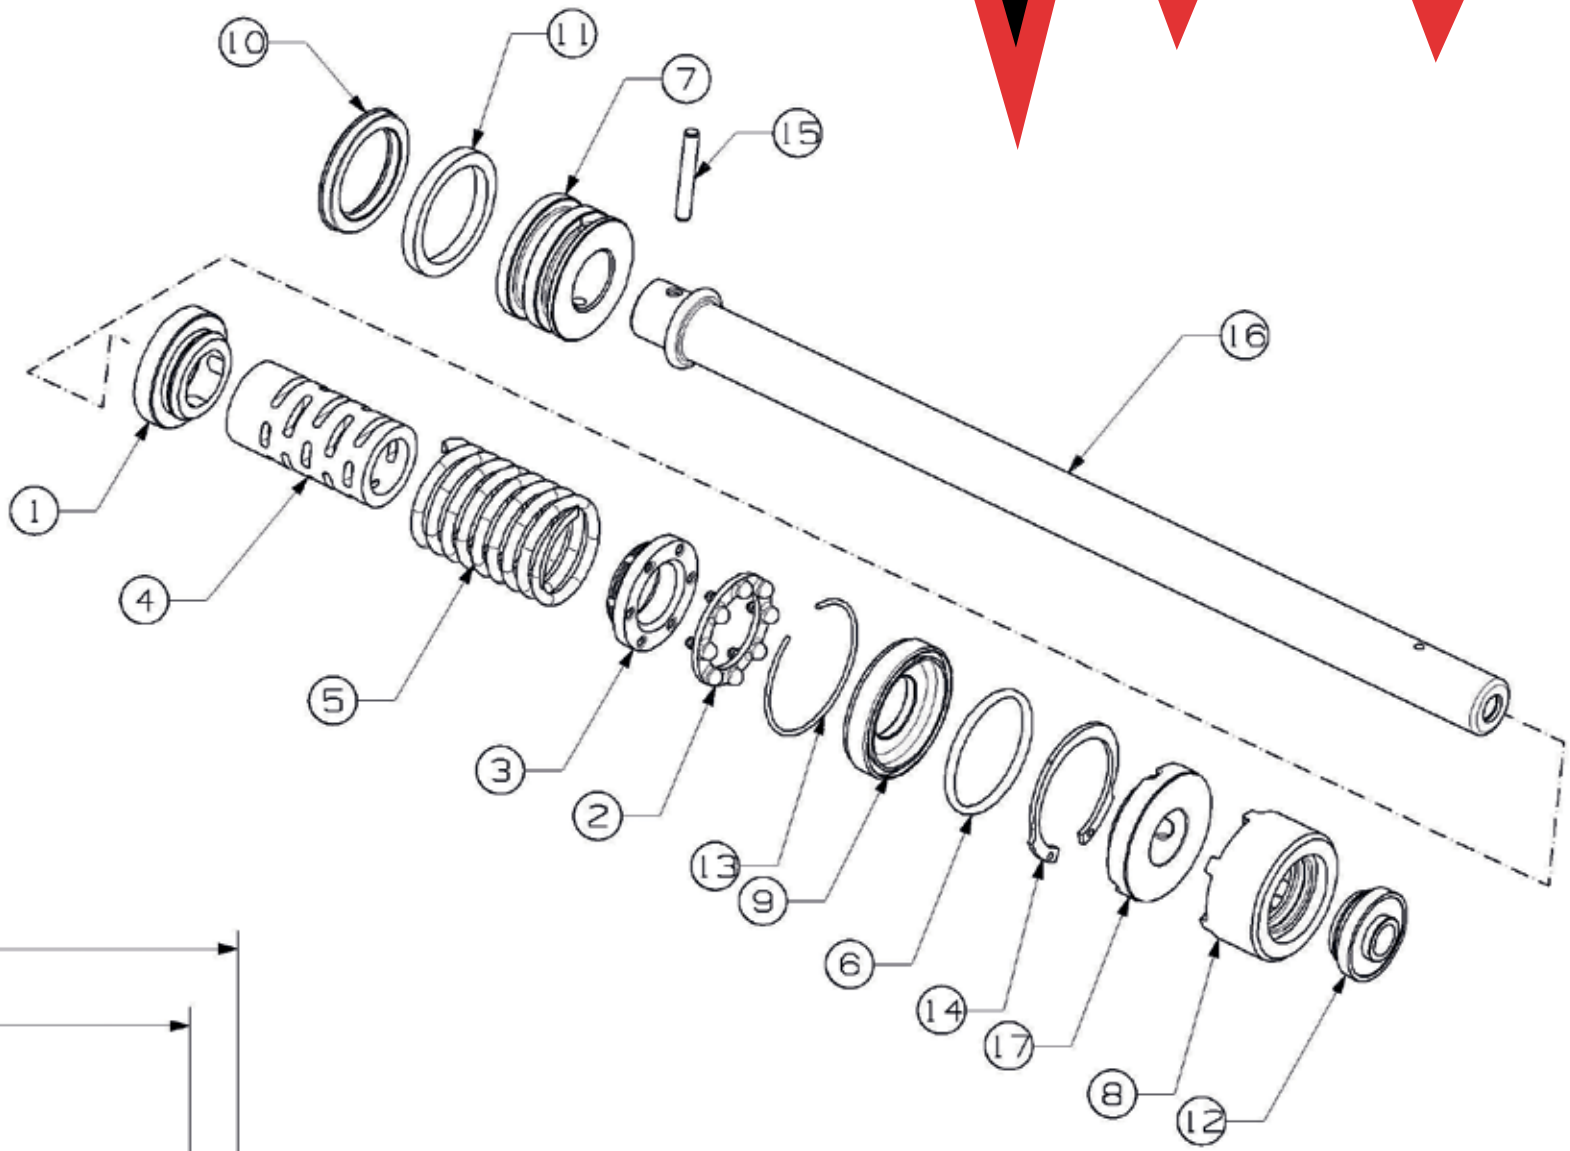

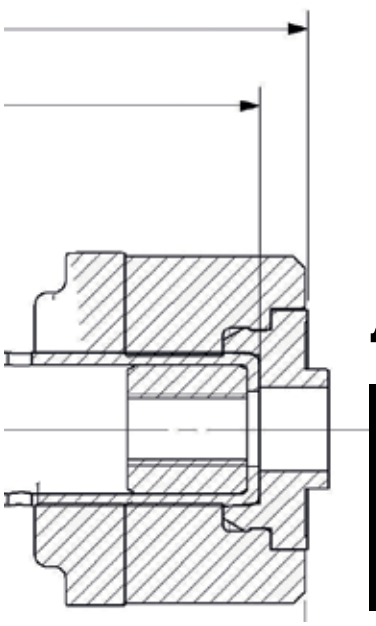

Switch TA, our hydraulic travel adjust system is available on 55 and 44 mountain bike fork models.
The optional travel change of 40mm (on the 55 series) or 30mm (on the 44 series), maximises the comfort level on any terrain with a travel adjust system that does not affect the damping system.

The basic idea behind the system has been around for a while: In 2001, we first developed ECC – "Extension Climb Control" which we later updated with the widely successful – ETA "Extension Travel Adjust".
With our systems we can boast to have been the first to offer climbing specific travel reduction systems that reduce axle to crown length making steep climbs much easier and more comfortable. Since 2012, we have closed our proven AER system into a cartridge and have added in the upper part and introduced an hydraulic travel adjust system.
The fork is optimised to smoothly adapt to any terrain without any effort from the rider.

Based on the same motivation that first had us develop the ECC system back in 2001, we have perfected the idea in the Switch TA and turned it into an hydraulic system.
With one simple switch of a knob, you can fundamentally change the parameters of your mountain biking experience by exactly the change you expect – precise to the millimeter.

Switch TA uniquely differs from other travel adjust systems because the mountain bike fork automatically re-extends without pulling back up on the bars. It's easy and simple while still allowing for buttery smooth travel in both the reduced or extended settings, right from the beginning of the travel.
Years in the making, tested, tough and reliable, Switch TA lets you switch easily between travel options.

AER AIR THAT MAKES YOU FLY!

The advantages of an air system sealed inside the stanchion tube and of a negative coil spring combined into one system: smoothness and lightness. While our competitors use air systems based on two air chambers (positive and negative) we developed a system using a large sized piston sliding directly inside the stanchion tube combined with a negative coil spring.
This means less seals and lower working pressures, so less friction and a super-sensitive feeling especially on the first part of the travel. Air preassure can be quickly adjusted through a single external valve.

RC3 EVO V.2 NEW FOR 2013 The new 2013 55 RC3 EVO V.2 has been updated with the addition of the V.2 Technology. What do you get when you add the famous EVO to a lightweight 55 Ti? You get a fork that performs like a 888 but in a lightweight package! The 55 now also features our revolutionary RC3 EVO V.2 open bath cartridge, easy to service and with interchangeable compression shims set to meet all your riding needs, upgraded with a new rebound piston with bypass shims circuit. There's no debating the fact that the performance of open bath systems can't be beaten and we just popped the lid off of this category with the EVO V.2 Compression and Rebound valve systems now included in the 55. This fork is the ultimate enduro class killer!

Forks/// FREERIDE / DOWNHILL

TRIPLE-EIGHT

Light and reliable:

The 888 RC3 EVO TI is only 200g heavier than the lightest air DH forks around while offering all the advantages of a coil: stability, reliability, durability and no stress. We listened closely to our pro riders on the World Cup circuit and were able to tweak our mountain bike forks to perfection with their help and feedback.

4-bolt design upper crown:

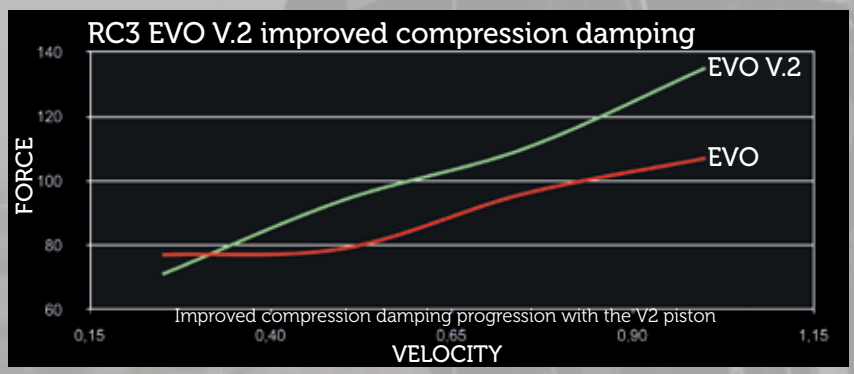

lighter, CNC-designed & machined.
The 4-bolt design is compatible with all new handlebar clamps on the market.

RC3 EVO V.2

Our revolutionary **RC3 EVO V.2** open bath cartridge with interchangeable compression shims allows you to custom-fit your fork exactly to your riding needs. V.2 Technology upgrades the EVO with a new rebound piston with bypass shims circuit. The result is higher adjustability range in rebound, more sensitivity and added effectiveness to the setting made to the compression side. Race proven.

No other fork has to be as stable as a DJ fork to catch the immense pressures that builds up when riders land on any surface. On the other hand, every extra gram of weight is a burden that needs to be carried through the air. In order to achieve both goals simultaneously, we have reengineered the suspension starting from the crown. The specific design of our DJ warrants massive stiffness and thanks to the lower parts round shape, any stress dissipates without difficulty. The deep cavity on the top reduces weight and remains flexible under the pressure from the steering tube. Since the pressure is distributed evenly along the crown and there are no specific stress points, the complete structure remains extraordinarily stable. To give such an engineering masterpiece the perfect finish, we combined it with specific lowers that support the overall structure. Selected models also come with a 20mm axle to guarantee precise steering.

Shocks///
ROCO

The ROCO rear shocks continue to define the ideal path to any ride, smooth realiable performance! The ROCO rearshocks were designed and proven in the world's harshest riding conditions, Whistler BC. After many years as the shock of choice for Whistler's Bike Park, our proven reliability and performance shines with many of these shocks seeing nearly 1 million vertical feet of descending without fault.

SUSPENSION PRODUCTS

Shocks///
ROCO

Lighter than ever before, every gram of the Roco Lite's 198g is tuned to deliver perfect performance and reliability giving you the best value possible for your money.

The design of the Roco Lite is much more streamlined and compact to perfectly fit into the overall look of your XC bike. Of course, we kept the lockout and rebound adjustment feature to guarantee your best riding experience.
The knobs and switch are particularly easy to reach and use thanks to its design.

You already know the dampers of the Roco series as high-end dampers for freeriders, downhill and all mountain riders with high demands. Roco dampers offer the perfect setting for every terrain and make your back wheel stick to the ground like glue.
With Roco Lite we have developed a rear damper that is designed specifically for XC and the perfect addition to your Corsa or 44 forks. As a team, the forks and shock are hard to beat when it comes to low weight and high performance.

MODEL 2013	ROCO LO	ROCO LITE
LENGHT	215,5x63,5 200x57	190,5x50 165,1x38,1
