DBS
Le cadre évolué +

DBS is a unique welding process in which the tubes of of the bicycle are joined together without conventional lugs or projecting welds. Each frame is built under the responsality of only one professionnal brazer with the attention and care of craftmanship. The result is a lighter, sturdier, more aerodynamic bicycle with a high designer look.

In the past, the man adapted to the machine.

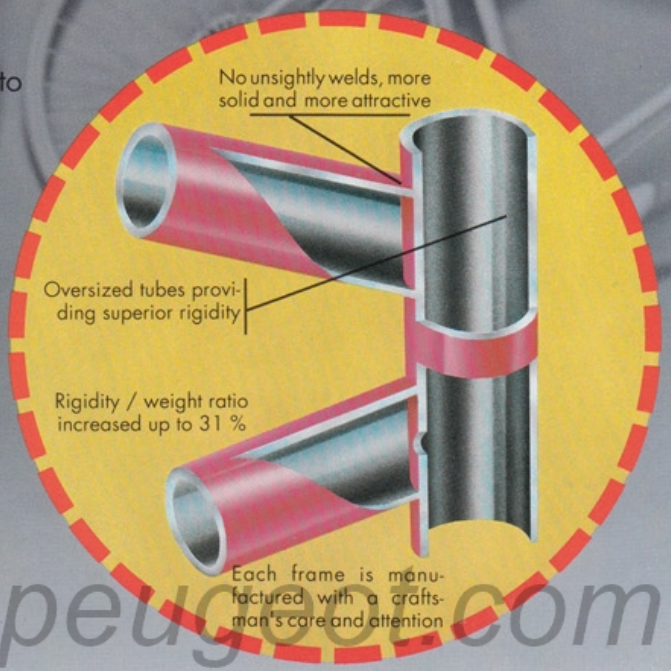

Today technology adapts to the man.

DBS

FRAME TECHNOLOGY

Now, to have a great bike, is to choose a ***DBS*** frame. ***DBS*** is a unique process in which tubes are assembled together without conventional lugs and unsightly welds. The result is a lighter frame, more aerodynamic, more rigid and much more stylish.

All bikes have a frame, but only the DBS frames ensure you of increased performance.
