**DBS Frame Technology.** Beside the materials used in building frames, there is also the technology behind the joining and welding of the tubing. DBS technology enables the user to benefit fully from the intrinsic mechanical properties of the steel selected for the construction of the frame. After years of research and development, and investements of over $2.5 million, we have come up with the DBS (Direct Brazing System) unique-of-the-art technology done by internal brazing.

**Lightness, rigidity and resistance.** Cromo-Lite frames are built of Cromo tubes using the DBS technology. The quality of these tubes (1.0mm) is best summed up in three words: lightness, rigidity and resistance. The combination of different alloys give these special tubes very high physical characteristics, up to 50% superiority over traditional tubes of the same diameter and thickness.

**The lightest frames in their category.** Carbo-Lite frames are built of improved steel tubes using the DBS technology. This high quality steel enables us to reduce the thickness to 1.2mm while keeping the same resistance and rigidity as conventional steel tubes. Carbo-Lite frames are the lightest in their category.

**Inner tubing is mechanically made and heat treated to give high-resistance and lightness to the bike.** Truly the best in frame tubing for bikes. The True Temper tubing is made from a high-resistant component mechanically treated to optimize its lightness. Due to a "stress relieved" treatment, the True Temper tubing is worry-free even in rough off-road riding. Combined with the DBS technology, it helps to produce the best bikes available.

**ISO 9001 Standards:** The manufacturer of PEUGEOT meets the strict requirements of the international standards of ISO 9001. It is the first bicycle manufacturer to have this certification. Our concern is to guarantee the optimal quality of our products and the ISO 9001 certification is the consolidated proof of our technical expertise.

**Powder Coat Paint** - Environmentally Friendly
In its effort to be the leader in its field, PEUGEOT has invested in environment sparing technologies by adopting the powder coat paint system. Tiny particles of polymer are applied on the frame to offer a high-lustre flawless finish, with exceptional dent, rust and element resistant qualities.

**Warranty**
Procycle Group Inc. guarantees its frames to the first owner only. Steel frames made by Procycle have a lifetime warranty. Aluminum frames used by Procycle have a 5 year warranty beginning on the date of purchase and suspension frames have a one year warranty beginning on the date of purchase. The components, other than the frame, are guaranteed for a period of one year.

**Warning**
PEUGEOT mountain bikes are not designed to be used with double clamp style suspension forks. PEUGEOT bikes will be void of warranty if user has installed a double clamp style fork on his bike.

**Present models may differ slightly from those available in stores. In its concern for constant improvement, Procycle Group Inc. reserves the right to modify its bicycle components and/or colors.**

**Limited quantities of bicycles. Ladies bikes also available on certain models.**
