ENDURANCE RACE 2016

RALEIGH

WHAT IS ENDURANCE RACE?

Whether you're going for 'King of the Mountain' on your favourite Strava section or challenging yourself on a sportive, you want a bike that is fast and comfortable.

This was a goal when we designed our Criteriums.

A shorter top tube and taller head tube bring the handlebars closer to you, making the drop bars less of a stretch on your back and neck while taking weight off your arms to reduce fatigue.

Compact gearing gives you a wide range of gears so you can sprint for the lights or take the hilly route home.

Carbon forks reduce weight, dampen road vibration and give precise handling so you can dive into the corners.

These bikes are fast enough to race, while being comfortable enough to ride all day.
