All information and all technical specifications are correct at time of press. Bianchi reserves the right to change them without prior warning. To further information, please see our web site www.bianchi.com that it's always updated.
Bianchi recommends all cyclists to wear a helmet and to abide by the high way code.

YESTERDAY

INSPIRED BY MAN SINCE 1885.

In 1885, the young Edoardo Bianchi opened a small mechanical workshop in via Nirone 7 in Milan, where he tried to develop his philosophy: to make high-quality bicycles with the best materials available. At the beginnings of the1900, he extended the activity of the company also to motorised vehicles, dedicated not only to cycle racing, but also to motorcycling ones: on a Bianchi motorbike the star of Tazio Nuvolari shone. However, Edoardo Bianchi never abandoned the bicycle, taking care personally to maintain the relationships with the athletes with whom he had decided to link his brand. Champions such as Girardengo and "Tano" Belloni, raced and won, on Bianchi bikes and the Celeste jerseys became synonymous with victory. After the bombings of the factories during the Second World War and the death of Edoardo Bianchi in 1946, the Bianchina 125 2T motorcycle became the symbol of the revival.
In cycling, the by now "legendary", Celeste jersey was on the shoulders of Fausto Coppi, who conquered 5 Giro d'Italia, 2 Tour de France, a World championship and even a World Hour Record at the mythical Vigorelli velodrome in Milan. After Coppi, Gimondi won everything, even his début Tour de France (1965). This was followed by victories in the Giro (1967) and the Vuelta (1968) and again in the Giro in 1969, until his World championship triumph in Barcelona in 1973 and one more Giro d'Italia, towards the end of his career (1976). More recently champions such as Moreno Argentin, Gianni Bugno, Mario Cipollini and Marco Pantani, "the Pirate", who in 1998 completed the prestigious double of Giro-Tour on his Bianchi bike, have won on Bianchi bicycles. The latest champion is Danilo Di Luca who, in his début year on his Celeste bike conquered the first edition of the Pro Tour.
Bianchi has not only written pages of history in road racing: in fact, in 1984, with the appearance of the first "Mountain Bike", Bianchi started to dedicate itself to off-road racing achieving many conspicuous results. The Nineties were the years of Bruno Zanchi and Dario Acquaroli, respectively MTB World Champions in the "Down Hill" and "Cross Country" specialities. The new Millennium has begun with many successes in competition from the Team MTB Bianchi: in 2000, José Hermida won the title of World Champion. 2001 and 2002, then the years 2004, 2005 and 2006 were, on the other hand, the years of Julien Absalon, who became World Champion, firstly in the Under 23 category, then in the Elite class, and also became Olympic Champion in Athens in 2004. The years pass, but the technology, the emotion and the Celeste passion remain and the enthusiasm of all the riders of the Gewiss Bianchi team is the confirmation. And so the story continues ....

TODAY

MAN IS ALWAYS AT THE CORE.

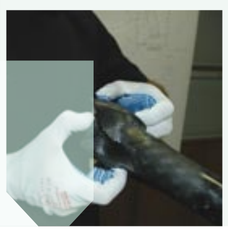

The fabrication of high quality, valued bicycles needs passion, enthusiasm but above all technology and the right equipment. Bianchi has got all this: more than 120 years of history at the side of champions and cycling enthusiasts.
Bianchi Reparto Corse has produced bicycles which have won anywhere, on the roads around the world, in the most difficult and exciting competitions of the international calendar and each champion has left his indelible work, this is the soul you feel in Bianchi bicycles. All frames have to pass a long and strict check before being qualified for their specific

use, tests are done first on paper and then on the road, which truly has the final say.
Each single piece, forming the frame, is numbered and registered during each assembly phase up to the final testing, to ensure a valid and quality product. Operators are responsible for all the development stages of each single frame, adding that original, exclusive touch which makes Bianchi bicycles unique.
This procedure is not only for the top of the range bicycles, used by professional riders and the most demanding amateurs but also for the bicycle destined for a wider public audience.
At the end of the process, a quality certificate is printed, detailing the production history of each single frame.
All Bianchi bicycles are the result of the same passion for cycling and respect of the rider which induce Bianchi to adopt additional checks beyond the standard safety requirements.
For all these reasons, Bianchi is the world leader in the production of attractive, safe and quality bicycles, licensed after the most severe tests foreseen by the European regulations or roads.

MADE IN ITALY

A TECHNOLOGY MADE BY MAN. FOR MAN.

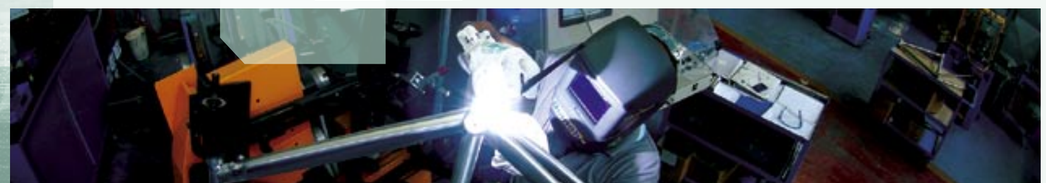

Skilled riders are very demanding about their bikes. Riding on specifically designed and custom-made frames is a different experience, a unique sensation, which allows the rider to express, at best, his potentialities avoiding physical problems and still feeling comfortable and efficient even after many hours in the saddle. Frames, components and accessories should guarantee in the course of time comfort, riderability, control and pleasure. That's why Bianchi has decided to give life to the Individual project, which allows the customer to personalize his bicycle, making it a unique piece, both from the point of view of style and use. Models and materials, sizes and colours, components and groups: these are the possibilities of personalization, because Bianchi Individual wants to guarantee the best performances during professional use, as well as during daily training.

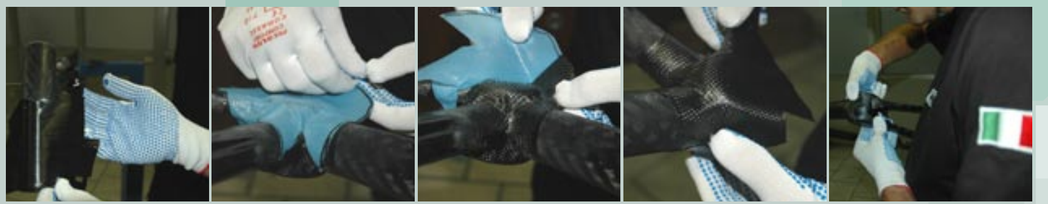

Individual offers a system which lets the customers check their anthropometric measurements, directly at the factory or at an authorized dealer, and then Bianchi Reparto Corse, in Treviglio, can realize your custom-made frame. Sizes can be registered and submitted to Bianchi, even by the purchaser himself, through a proper form that can be downloaded online, in the section dedicated to this project, on www.bianchi.com.

S9 Matta, FG Lite, Pinella and 928 T-CUBE corresponding to titanium,

aluminium, steel and carbon: Individual covers 4 models which can also be made to measure to make the Specialissime of Bianchi Reparto Corse even more exclusive. The project can offer all our customers Bianchi's experience, technology and service, qualities only ever dedicated to the professional riders. In the historical Bianchi Reparto Corse dept, where the bikes of the greatest champions were manufactured and where nowadays technological jewels are still being produced, the painstaking care for detail makes the difference.

Tubing in different materials are cut, milled and prepared, one by one, for each single frame. The joints between each tube, previously treated in a ultrasound tub, are realized with pinpoint precision, so to guarantee a high-level TIG welding process and thus reliability, whereas the carbon tubes are bound together with a special structural aeronautic glue.

Performances are granted by the insertion of supports, made by means of unidirectional high-modulus carbon fibres in the lugs areas, heat treated at high pressure to make the frame rigid and resistant. Besides, it is possible to differentiate the insertion of carbon fibre supports in each single joint, thus allowing Bianchi Reparto Corse to produce specific frames suitable to the single rider or event.

Individual allows the customer to select the group most suitable to his needs: the different models can be assembled with either Campagnolo Record or Chorus groups or with Shimano Dura Ace or Ultegra.

Individual bikes are even more unique thanks to the possibility of personalizing them with the name of the owner and the emblem of the Bianchi family, the stylized eagle which, from the beginning, has appeared on the head tube of the frame, tinged with gold for this special occasion.

As a further guarantee of authenticity and uniqueness of the bicycles born from the Bianchi Individual project, a certificate follows each piece. This proves how Bianchi, through the Individual Project, wants to emphasize its history of excellence adding a special touch to its products.

ROAD

HOC

Excellence with no compromise. Aiming high. The bicycles of the HoC category (Hors Categorie) have been conceived to enhance the riders' performances. The reactive geometries have their main features in lightness and rigidity: an unbeatable mix. There are two models of this family: 928 Carbon SL and FG Lite, in Alu Carbon and the classic version made entirely from aluminium. The 928 Carbon SL is the pinnacle with regards to carbon and metallic alloys: the monocoque frame, weighing only 860 grams in a medium size, is characterized by a unique and essential design, "tough" in the most stressed area and light where needed. The high modulus fibres are implemented by nanotechnology and by the unidirectional Carbon Woven. Nanotechnology represents a step forward in increasing reliability and mechanical resistance: the special addictives, mixed with the resins, used to bind the fibres, allow us to obtain a more compact structure, without increasing the weight of the frame and at the same time enhancing agility and reactivity. The frame is even more rigid, light and reactive to stresses. Besides, the new rear dropouts, made from carbon, are stronger, yet lighter.
The FG, named after the champion Felice Gimondi, is in Hyperalloy aluminium, the best among the metallic alloys. The tubing is triple butted, ultrathin and ultralight, featuring the exclusive Reparto Corse design.
Diameters are classic and shapes traditional and light. The bottom bracket area is strengthened by means of the structural foam injection: a reliable system patented by Bianchi. The headset, fully integrated, is lighter than ever. Hors Category: few grams to achieve excellence.

ROAD

B4P

The B4P, Born for Performance, frames were designed for you to dig deep into the heart of your performance: these frames offer high performance on any type of road, and yet they are versatile by nature. They are intended for competitors, and are capable of supporting them during their favourite sport. Light, but not extremely so, they guarantee rigidity and an aggressive response. The range is complete: carbon, aluminium and titanium. All offer specific solutions for any technical requirement.
The 928 Carbon T-Cube is completely new, improved in terms of sizes and enhanced at the performances level. Lugs disappear in favour of the "Tube to Tube" technology, made in Bianchi. The wrapped joints completely change the design of the botton bracket . The resulting weight is also worthy of a mention: the medium size weighs just 1 kg. Even the graphics have been renewed to allow the 12K fibre to show through.
The 1885 Alu Carbon, on the other hand, is unchanged: the 7000 series triple-butted alloy is a guarantee. The Hydroforming technology combined with the completely smooth TIG welding of the down tube and chainstay is an aesthetic plus. Comfort has been improved thanks to the ultra carbon high modulus employed in the rear stays.
And then there is the S9 Matta frame, made in titanium, the king of materials. Full 3Al/2,5V double-butted Titanium alloy, ultra light and pure, without carbon rear stays. The design is a Reparto Corse exclusive, made in Treviglio by the hands of Italian craftsmen. The headset is completely integrated, light and rigid, while the botton bracket area is re-enforced with Structural Foam Injection. Could you want for anything more?

MADE IN ITALY, **MADE BY PEOPLE.**

ROAD

C2C

The C2C concept (Coast to Coast) is a recent, but already a very much appreciated concept. It is conceived for the long-distance rider who does not want to give up comfort or performance. Comfort is the key word: the frames of the new C2C range, are today, even more comfortable, thanks to the quality of the carbon fibre employed and the K-Vid technology, which consists of Kevlar inserts strategically positioned on the fork and seat stays. This technology permits us to eliminate and filter the vibrations coming from the road surface thus making riding less tiring and therefore making those long hours in the saddle more efficient.

The geometries offer a comfortable and relaxed position in the saddle, which open up the angles for the torso, neck and pelvis, critical points for the long-distance rider. Comfort is further improved thanks to the BAT, Bianchi Active Technology: a proper mix of carbon fibres employed in the construction of the rear stays and their special section which increases the vertical reaction of the frame, without affecting rigidity and control under pedal pressure. There are two models in the range: 928 Carbon, featuring exclusive and innovative shapes and Via Nirone 7, available in two versions: Alu Carbon and Alu.

928 Carbon is "alternative", smoothly shaped, an absolute technical product.

Via Nirone 7 is in triple butted 7000 series aluminium with new hydroformed sections and is produced in two versions: "pure" or with carbon seat stays, implemented with K-Vid technology.

ROAD

DAMA BIANCA

In our new collection of bicycles, Bianchi has paid the usual attention to our female audience. New proposals of quality have enriched the Dama Bianca range that now boasts four new models: Valentina, Daniela, Elena and Silvia. At the top the 2 new 928 Carbon T-Cube models, in carbon fibre with 2 levels of components, designed to suit the most experienced and demanding female rider. The innovative Tube to Tube technology eliminates lugs thus offering maximum freedom in the choice of the geometry. The frame is rigid and very light, the bottom bracket area is "muscular" with an oversized bb shell. Comfort is guaranteed by the very quality of the material and by the 12K weave, clearly visible under a thin layer of shiny protection, incredibly fashionable. Then there is Silvia, in triple butted 7000 series aluminium alloy, with an ideal frame for competitions: rigid, reactive, yet within everybody's capability. The down tube as well as the chainstay are forged using Hydroforming technology to epitomize their beauty and performances, without sacrificing lightness, so important when testing in competitions. The TIG welding is smooth, while the special anticorrosion surface treatment offers the necessary guarantees for a long lifetime. Finally Elena, with a similarly technical frame, where comfort prevails over performance. Developed for the specific morphology of the female body; it is an excellent means to attract women to cycling. The frame is totally made from triple butted 7000 series aluminium and has smooth welding that highlights its harmony and beauty.

SPECIAL

Cycling is a relatively relaxed sport. Enthusiasm and training are the two ingredients needed to get fun, satisfactions and performances. But nevertheless not all cycling is the same. There are different specialties. Such as time-trials, races against the clock. Or cycling in the countryside, which is called cyclo-cross and then there is track cycling, a noble and attractive specialty. "Special" bikes belong therefore to the Special category, bicycles born from the commitment, the strength, the passion of artisans and riders in order to achieve even more important targets, designed to meet the needs of every specialty, whether professional or not. D2 Crono Carbon is the frame to race against the clock. This frame is designed in cooperation with professional riders and boasts the exclusive and innovative Reparto Corse's design matching aerodynamics, lightness and rigidity, thanks to the reinforced and oversized bottom bracket.

D2 Crono Alu combines aerodynamic to the practicalness of the tube-to-tube welding from which "time trial" and triathlon geometries are born. The tubing is both double and triple butted. D2 Ciclocross "Cross Concept" is made with a high and aggressive geometry, required by off-road competitions. Lightness is a feature of the scandium aluminium alloy tubing, optimised by the rear stays in carbon fibre, which contributes to a reduction in vibrations and improved traction. D2Ciclocross "Axis" instead is in full 7005 series aluminium alloy, with different thicknesses, as per Bianchi's exclusive design.

And last but not least, D2 Pista, to compete inside where speed and smoothness is required. Its special aerodynamic geometry comes from aluminium alloy tubing offering both rigidity and stability. Available in several sizes, an unmistakable product of Made in Italy and Reparto Corse. The Steel model is incredible for its vintage style, a celebration of the essentiality: the cult piece of the Bianchi's catalogue is made entirely of cr-mo steel, a classical and evergreen frame.

MTB

RACING

The Racing range is the most complete and aggressive among the Bianchi MTB ranges: the frames being made from either titanium, aluminium or carbon.
Oetzi Carbon is the most improved of the classic racing frames: light and rigid, it weighs only 1,2 Kg in a medium size and it is a mix of high modulus fibres, implemented by nanotechnology and by the unidirectional finishing. The rear stay is new and designed to withstand torsion and yet offer exceptional comfort while absorbing impacts. Oetzi Carbon is the frame developed for those who wish to improve their performance.
Oetzi Alu in triple butted Hyperalloy, the result of years of experience and successes at international level, has now been refreshed with new graphics and technical solutions: the top tube as well as the down tube are made stronger by Hydroforming technology, specially conceived by Bianchi Reparto Corse. The bottom bracket, more rigid and lighter than before is now even more resistant to stresses: Bianchi succeeded in improving an already excellent product.
The Oetzi Ti is an ultra-modern frame in titanium, capable of combining the properties of this noble metal with competition requirements. The ultra-light and ultra-resistant tubing is made from double butted 3Al/2,5V certified Titanium alloy. Exclusive design and technology: the Structural Foam Injection in the most stressed areas of the bottom bracket and the rear drop outs, drawn from CNC machining, make this frame a truly special one.
The Racing bicycles include the Camos, real Italian flair in a Full Suspension design for Cross Country. The frame is in high modulus carbon fibre with Dual Flex Chain Stays technology, having a virtual pivot instead of a 4-bar linkage. The stays are extremely rigid and coupled in a double function monolith, a turn on the screws is enough to choose the most suitable position: laterally rigid and vertically active, in line with the air shock. The future of Cross Country is within reach.

PERFORMANCE

The Performance range of Mountain bikes is strong and resistant, suitable on all kinds of terrain: the frames are light and made from triple butted 7000 series aluminium alloy. An optimisation of the alloy is more and more appreciated and employed, even for the top of the range. Mutt is the perfect choice for Cross Country: it is a compact, practical and a well handling design. The down tube and the chainstays are improved by Hydroforming technology, along the exclusive specifications of this Reparto Corse design.
Caal and Legor have both front and rear suspension, featuring a 4-bar linkage; a special and sophisticated technology, designed in cooperation with Renault Sport R&D, and the Horst Link patent. This special geometry of the rear triangle is able to keep the power of the pedalling action separate from the shock-absorbing action, thus allowing a "no-bobbing effect". The Caal model features 100mm of travel, whereas the Legor has 130mm.
Both boast elegant finishing, complete with a special anti-corrosion treatment.

MTB

LEISURE

The Leisure mountain bikes are an ideal mix of performance and pleasure. Frames matched to technology and reliability, a combination which is not afraid of time and that promises to withstand any mistreatments typical of the “off-road” way of life. Geometry is less aggressive, more oriented towards stability and comfort. The front triangle is designed to give a more relaxed riding position, providing better manoeuvrability and control on descents and sharp turns. Quality is ensured by the 6000 series triple butted aluminium alloy and by the tube-to-tube TIG welding: tubes are light in the less stressed areas and stronger where greater reliability and rigidity are needed, to resist the torsional flex originated by pedalling and guarantee the utmost freedom of movement. The design is at the same time modern and elegant, characterized by the originality of the Reparto Corse Bianchi design. The special anti-corrosion surface treatment, synonymous with quality and durability, is another feature of these special frames.

MTB

DIRT

The Bicycle is not only synonymous with technical performances, it can also mean fun and tricks. The Dirt range has been conceived to satisfy the demands of the modern 'tightrope walkers' of the two wheel world. The Dirt bikes are in aluminium, compact, low, aggressive, agile and quick. Easy to get going, to jump, to climb and to jump down from the pavements, and to win the daily challenges against the urban jungle. The frames are in triple butted 7000 series aluminium alloy, like those of Tour De France style racing bikes or cross country mountain bikes. The welding is well made and solid, designed to support all the stress and strain caused by jumping, without taking anything away from the aesthetics, thanks to the Hydro-forming technology. The components are ultra technical: the suspension forks guarantee control during landing, technical requirements which cannot be sacrificed.

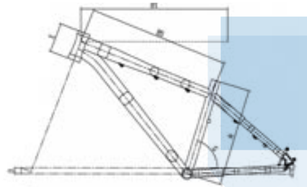

The disc brakes are powerful, precise and easily modulated, useful in reducing braking distance. Shapes are attractive and aggressive, characterised by strong and square profiles, with CNC-machined pieces, a rigid and compact rear triangle, together with the headtube, where the stresses of street acrobatics is concentrated. Finally, the special anti-corrosion treatment safeguards this object of fun for as long as possible.

SPORT

CAMALEONTE

Pedaling for fun, to stay fit, but without giving up putting yourself to the challange. Changing your "skin", how and when you see fit, just like a chameleon.
The range includes four models, designed to satisfy all your needs. Whether related to the 'look', or the real stuff.
At the top Camaleonte IV: the personality of a very special racing bike, the look cared for down to the smallest detail.
Camaleonte goes beyond the limits of the classic sports bike. The frame is made entirely in 7000 series aluminium alloy, the strongest and most resistant type, with triple-butted tubing and the same DNA as the purebred frames of the Reparto Corse range. In addition, the frame is entirely TIG- welded and protected by a special surface anti-corrosion treatment, increasing its resistance and its useful life.

Exclusive "made in Bianchi" design, moulded by means of Hydroforming technology, thanks to which it is possible to obtain an enhanced lightness-stiffness ratio. "Aggresive" geometry, featuring a sloping top tube which increases the reactivity of the bike and longer rear stays for added comfort.
And the fork? In carbon, for the IV version, or aluminum for the Camaleonte III INN, III and II. On all models the handlebar stem is adjustable, in order to offer the maximum freedom when searching for that proper riding position: low and aerodynamic for challenging your weekend foes, higher and more upright to ride in total comfort.
Finally, the new entry, the Camaleonte III INN, fitted with the Shimano Alfine group and featuring extremely clean lines and an accurate gearshift built into the hub. The choice is now up to you.

CITY

T-ROAD

Viale Abruzzi and Via delle Battaglie are the suggestive names of the bicycles from the T-Road range. Names which remind us of the historical seat of the Bianchi factory in Milan and today's residence in Treviglio (Bg).
These are agile bikes, accessorized, elegant and practical, which allow the rider to move easily and freely.
The frames, in triple butted 7000 series aluminium alloy, are simple and minimal, made with care to detail and through Hydroforming technology to increase resistance in the tube lugs, especially at the head tube , the one of the most stressed parts of a frame. Different components: Viale Abruzzi in a double version, for men and women, fully equipped, sporty yet comfortable at the same time, versatile, designed to face different tracks without any trouble.
Via delle Battaglie, instead, is a more essential, agile, and practical bicycle that likes to travel a long way. The large wheels, the adjustable stem, the rear carrier and mudguards make travelling easy and practical, yet at the same time maximising comfort.

CITY

CROSS TERRAIN

The Beach Cruisers or "beach bikes" used by surfers to carry their surfboards, can now be used around the cities. Bianchi launches the Cross Terrain range and proposes the Milano, more than a simple bike for leisure time: Milano is a fashion bicycle, irresistibly attractive, kitted out accessories and components which make this bike useful and efficient in the inner city.
Milano is the bike for in-vogue people, a trendy bike, without compromises concerning quality: frames are made from aluminium alloy, using tube-to-tube TIG-welding, relaxed geometries conceived to ensure manoeuvrability, safety and maximum comfort to the upper body. Large wheels ensure full control of the bicycle even over bumpy terrain, such as cobblestone and tramways. The flat-type handlebars, similar to those used on Mountain Bikes, are wide and efficient and are fitted shifters attatched to the grips, which are easy and intuitive to use, for men and women, either when speeding up or slowing down. Finally, for the connoisseurs, the choice of the Shimano Alfine group makes Milano even more essential and easy to use.

CITY

S-ROAD

To be able to move comfortably in the city, without having to sacrifice efficiency: the S-Road series have been conceived with all the accessories needed to make the daily journeys comfortable without sacrificing the speed and agility needed.
It is enough to glance at the 'Spillo' range to understand that we are not dealing with simple city bikes, these are designed to offer maximum comfort without excluding efficiency and agility. There are specific geometries for both men and women. The new frames are made from 7000 series aluminium alloy; a material that remarkably increases resistance and longevity. The fitted accessories is totally complete and transforms the 'Spillo' into a means of transport which lacks nothing, from the daily commute to those longer weekend trips. The rear carrier, fixed directly to the frame, is wide and well structured offered a secure fixing point. The chain cover efficiently protects the legs from a dirty chain. The triple chainsett is a technical detail that makes the difference, it does not place limits to the dream and to the joy of cycling. The range of gears is therefore progressive and almost infinite, allowing for greater adaptability over different terrains. The accessories have also been closely studied: the adjustable handlebar, the front and rear mudguards, and the lights; designed to enable you to travel safely even in bad light conditions. Then the fork: in aluminium, rigid or with suspension, according to your individual needs... and there you can find that special feeling!

BIKE TRACE

To own a Bianchi bike means to belong to a big family. With the Bike Trace project, fans and owners can count on an exclusive tool which ensures, at any time, the full traceability and identification of any Bianchi RC (Reparto Corse) bicycle. You just need to log on the **www.bianchi.com** website, click on the Bike Owners section and register your bicycle by filling in the Trace Form with your personal data and those of the frame. The recording of this data will make it possible to trace back the history of any bike by monitoring the history of the text and also its 'sporting life'. The **Quality Control Report** coupon, which can be found in each packaging and includes all the necessary information for the product registration, is fundamental. In the event of loss of the coupon, it is however possible to find the necessary data directly on the frame itself. The frame code is marked on the bottom bracket. This service guarantees the total traceability of the bicycle providing a precious support in case of theft and loss. **Thanks to Bike Trace your Bianchi is yours even more.**
