FAT
CITY

"The Fat Chance is a no nonsense, business-like machine."

". . . beautifully quick and responsive . . ."

"It's an impressive buy."

Mountain Bike

". . . a short, light, compact bike that begs to go fast."

"It seems as eager as a young colt."

". . . a complete bike, not a collection of parts."

Cyclist

". . . American handbuilt quality at an import-fighter price."

". . . a real climber."

". . . alive and maneuverable."

"Banzai!!!"

Bicycle Guide

At Fat City Cycles, we're proud of the Fat Chance bicycle. It delivers a level of performance and satisfaction unlike any other. And no other bike offers the durability, value and advanced design that the Fat Chance does.

From the custom drawn True Temper triple butted tubing to alignment tolerances of thousandths of an inch, everything about a Fat Chance bicycle is designed and executed to give you the best ride, the most fun, and great performance.

On your Fat Chance, you can climb with unmatched ease and descend with stability and control you may never have thought possible. But there's more to the bike than just great performance. It's rugged. Every joint is plasma welded, a unique process that puts the Fat Chance on the cutting edge of technology. We introduced plasma welding to bike manufacture and we're still the only bike builders in the world to use this technique. Our paint jobs, whether stock or custom, always get the added protection of a powder epoxy coating. And our "braze-ons" are silver soldered instead of brazed with brass. This is a high quality bike, hand built by people who take personal pride in their work—and still available for less than $900.

We've spent five years refining our original design with the sole intention of creating a bike that outperforms anything else on two wheels. You can't spend your money better anywhere else.

Built to last, designed to perform; the Fat Chance makes biking a blast.
