2013 HARO MTB

Haro has been a household word in the sport of BMX for more than 35 years. And since Bob Haro's creation of the Haro Freestyler back in 1982, the world's first BMX/Freestyle specific frame and fork, the sport has never been the same. It's that same great passion and ingenuity, that "Dare to be Different" attitude that lead to the creation of Haro's first mountain bike only 4 years later, the Haro Explorer.

For more than 25 years Haro has used that same formula for success with its mountain bikes as it does with BMX, making great bikes that great people ride. In fact, some of the sport's best athletes have ridden Haro in the past, names like Llanes, King, Sheppard, Rasmussen, Porter, and Haro downhill World Champion Greg Minnaar to name a few. They rode Haro for the very same reason current MTB/Freestyler Greg Watts does today, because the best deserve and demand only the best. Haro.

We could go on and on about Haro's rich heritage and innovative pedigree but we won't. What matters is you, what matters is now. Demand the best, demand Haro. If you're reading this, you're half way there. Get out and ride.

Introducing THE FLC29

featuring

HIGH MODULUS T700 CARBON

Imagine a mountain bike with the quick, agile feel of a legendary Haro BMX bike and the solid, stable handling of a 29er. Sound good? Now mold it with lightweight, next-generation carbon fiber and you get...

THE ULTIMATE TRAIL MACHINE

THE HARO FLC29

Hundreds of hours of research and development went into Haro's very first carbon fiber mountain bike FLC29 to give it superior handling and stability characteristics unlike any other carbon fiber hardtail 29er.

BUILT BY RIDERS FOR RIDERS

Like every Haro bike, the FLC29 is built by riders for riders and possesses an unmatched blend of performance, durability and value. Thanks to Haros' M²X MegaMax Technology and T700 Carbon , the FLC29 features unidirectional carbon fiber layup and custom tube shapes to maximize efficiency and strength for ride qualities so smooth and predictable that the FLC29 practically disappears beneath you.

The FLC29 with M²X MegaMax technology

The FLC29 with M²X technology optimally balances the inherent tensile strength and modulus of carbon fiber with innovative designs including an oversized, tapered head tube and BB92 bottom bracket. The result is a machine that rockets you forward with every pedal stroke, razor-sharp cornering to make the tightest turns a breeze and vertical compliance that smoothes out even the rockiest trails.

While many brands produce carbon frames that may only endure one season, the Haro FLC29 is built to last. As a testament to its quality construction, Haro features an industry-leading limited lifetime warranty for all FLC frames. And as a bonus, the starting price for a complete, well-equipped FLC29 is less than just the frame alone of many other carbon fiber 29ers. The Haro FLC29 is a high-performance, value-packed, no-compromises trail machine with legendary ride qualities that only a Haro can deliver. So get your legs around one today and experience it for yourself!

FLC29PRO

SIZES	15.5" 17.5" 19"
FRAME	FLC 29" with T-700 high modulus carbon fiber w/ M²X technology (tapered head tube, massive OS downtube, and BB92)

THE ELITE OF THE FLC

HIGH MODULUS T700 CARBON

The very elite of the FLC Carbon series was designed to put you off the front of the field, the Pro is available as a complete bike or a frameset. Built with Haro M²X MegaMax technology and T-700 carbon fiber, innovative geometry and advanced features like a BB92 bottom bracket, tapered steerer and top shelf components, the FLC 29 Pro will help get everyone from local pros to weekend warriors across the finish line first.

ARE YOU READY?

Balancing the catlike reflexes and feather weight of Haro M²X MegaMax technology and T-700 carbon with a performance-packed component build, the FLC 29 Expert delivers the ultimate in technology without the ultimate in coin. 100mm travel Rock Shox forks and workhorse Shimano components make the FLC 29 Expert ready to shred the race course or the local singletrack. The only question remains, are you ready to shred with it?

For those who want a serious race bike foundation, the new Flightline Carbon Comp can't be beat. Featuring the same Haro M²X MegaMax technology, T-700 Carbon, tapered head tube and BB92 bottom bracket as the Pro, the Comp features a value-packed build kit focused on putting the hurt on your competition, not your wallet.

BUILD YOUR DREAM MACHINE

FRAMESET

Whether you want a fully custom build or are simply looking to upgrade your current frameset, the Flighline Carbon can turn your dream machine into a reality. Boasting all the advanced M²X MegaMax technology, innovative geometry and eye-catching design of the Flightline Pro, every Flightline frameset benefits from countless hours of R&D; both in the lab and on the trail. Unlike many other brands, Haro stands behind the quality of the Flightline Carbon, offering a limited lifetime frame warranty.

HIGH MODULUS T700 CARBON

FL3G

THE THIRD GENERATION FLIGHTLINE

With a goal of reduced weight, ride tuned geometry, and stunning good looks the Flightline Series has been fully redesigned this year. The result? The all new Flightline 3rd Generation frame designs by Haro. Inspired by its high performance carbon fiber counterpart, the FL3G is packed with performance features and the optional FL3Gi with a semi-integrated head tube keeps steering components neatly tucked inside, protecting your investment and giving the FL3Gi a super clean look.

Both FL3G designs combine a nice blend of lightweight 6000 series aluminum with custom shaped tubing you'd swear was hand sculpted to create a nicely balanced frame that delivers torsional stiffness for maximum power delivery and vertical compliance that keeps the ride silky and smooth.

The Flightline Series features lighter weight wheels, faster rolling tires, and all new stem/bar combos that improve front end handling and increase comfort. Flightlines come in 4 different wheel sizes but regardless of the size you choose you get the same great riding experience big or small and all at a price you'll appreciate. And while Haro Flightlines are budget friendly on the front end you'll be glad to know that with Haro's limited lifetime warranty they'll remain equally friendly on the back end. Good to know? Time to go!..... buy a Haro that is!

SPECIFICATIONS

FL29COMP

FLATTEN THE HILLS

If your mission is to flatten the hills and roll over rocky terrain effortlessly, the Flightline 29 Comp is ready for duty. Utilizing the FL3Gi frame and endowed with smooth welds and all the innovative geometry of the higher-priced Flightline models, the Comp delivers a quick, nimble ride uncommon for 29ers without leaving you penniless. Throw in a mix of high quality, value-packed Shimano Deore components, and the Flightline 29 Comp flattens more than just hills, it flattens the competition too.

What's in a name? As far as the Flightline 29 Trail is concerned, endless miles of singletrack. Named exactly for the environment it thrives in, the Flightline 29 Trail devours all trails paved with dirt. Thanks to its FL3Gi and advanced geometry, the Flightline 29 Trail handles tight corners with ease, and big 29-inch wheels make even the sketchiest high speed fire road downhills smooth and stable.

Some people might suggest that because this is a "kids bike", it doesn't need to feature cutting edge technology or any kind of real performance benefits. We couldn't disagree more. One look at our Flightline 20", with its increased standover height and all new FL3G frame design lets you know that it features a ton of the same technology as our flagship models costing up to four times as much. It might be the smallest mountain bike in the line, but it's certainly not short on performance.

2013 FREESTYLE MTB

From the private stocks comes the 2013 Steel Reserve line of freestyle mountain bikes. From the creator of the original Freestyler BMX bike exactly 30 years ago Haro was not to be outdone in the creation of the newest Steel Reserve frames. Double butted 4130 chromoly tubing, short, tight chainstays, low center gravity and shorter headtubes are all important features that make this series of bikes the top of their class. Add in the interchangeable Six Shooter dropouts and these frames can handle single speed and gears alike to handle any kind of terrain. With 3 options to choose from Haro offers something for everyone. Everything from the Steel Reserve 1.1 with a rigid fork to the to the 1.2 with 80mm of fork travel to the custom build with every top brand of components available 1.3, these bikes are capable of flip-whipping their way through the parks or on the local trails. Let the Steel reserve line of freestyle mountain bikes help you raise your game.

STEEL RESERVE

Throw a legendary Haro BMX freestyler and a Haro mountain bike in a smelter and you get the ultimate freestyle mountain bike – the Steel Reserve 1.3. The Steel Reserve 1.3 is 100% 4130 chromoly, butted for maximum strength and weight savings while boasting CNC horizontal slotted interchangeable Six Shooter dropouts for superior versatility. The Steel Reserve 1.3 is a custom built bike without the custom built price tag, featuring premium components like an X Fusion Velvet R fork, Alienation Skylark double-wall rims, Haro 3 piece chromoly cranks and sealed thin pedals.

SPECIFICATIONS
