A CLUMP OF BIKES

KONA DESIGN TEAM _

During the last couple of years, the fascination and enthusiasm for the New School of off-road riding has exploded _ It started out of our home trails on the North Shore Mountains of BC _ Many companies have tried to associate themselves with this hotbed of Out of Bounds riding, some have even ventured to register the name as a trademark in hopes that it would make them appear to be in touch with the new breed _ Fact is, Kona people have been riding the North Shore trails for the past 20 years and using it as the bottom line test for reliability since we started making bikes in 1988 _ These days we're being praised for carefully building strong and durable machines with a balanced ride when before, the same bikes were just considered heavy by the skeptics _ Thing is, the new breed of riders have raised the bar for bike performance and we've always believed in being right there with them _ Now you might wonder what this Kona Clump thing is all about and think we've just moved off in a weird tangent _ What we've always liked to keep in mind is that while you need to understand the science and technology behind the design and materials, it's even more important to keep in touch with the organic nature of just plain riding _ There has never been an inventor who can come up with a concept and turn it into the greatest bike since the wheel was invented _ The Kona way is to use the whole Clump of people that work here to really understand what works and why it works _ To put the pieces together we have the Kona Design Team and this is who they are _

PADDY WHITE

THE BEAR _

Lot of people call Paddy The Bear because he can get real grumpy sometimes _ Paddy hails from Wyoming and heads up the Kona Design Clump because no one else wants to do it and he's real good at it _ Paddy is a damn fine bike handler who's raced a lot of downhill _ When he rode the track people knew to stay out of his way in the miss and out _ hell of a motocross rider too _ never seen anyone who can eat as much salted licorice as The Bear _ his favorite trail is Devil Cross on Galbraith Mountain _

DR. DEW

THE DIRTY DR _

Well you can call him Dewey or Dr. Dew _ he's the guy who figures out all the technical drawings from the sketches and thoughts that Paddy, Jake & DJ dump on him _ Dew was real good at math in school, when it came time to start drafting on a computer about 10 years ago, he taught himself how to run a CAD drafting program on his own _ there probably isn't anything that Dewey can't ride... water skis, tele skis, skateboard, the other day he came in carrying an old woody ski with a couple of skate trucks mounted and started ridin, it around the neighborhood _ whooee that was a sight when Dewey cruised down Main on the longboard wearing that funky brown coat he found in a dumpster over top of his shorts, gumboots and a 3 color beanie _ his favorite trail is Smoke's on Seymour _

DJ CLAY

HIS DAD CALLS HIM JACK _

Clay's a homeboy, grew up in B'ham, Washington riding BMX dirt & track all day long _ well he grew up smart got a degree in science & technology at the U and learned a lot of really cool stuff _ like stress corrosion occurs by galvanic action _ which led to a dream job straight outa college designing lotsa cool BMX frames 'n parts _ Clay's stuff is all over the Kona BMX bikes and sneakin' into the rest of the bikes too _ didja notice his cromoly bulge crank on the Stab Primo _ his favorite trail is Double Black Diamond on Chuckanut Mountain _

JOHN COWAN _ FACTORY TEAM CLUMP _ BIG ISLAND PHOTO BY GIBBY

HEART OF KONA

SLOPING TOP TUBE

The essential element of Kona frame design _ Tighter rear triangle = better acceleration _ Superior main frame modulation _ Stonger head tube area _ More standover clearance and maneuverability _ It's why the Kona ride is recognized as the most balanced & efficient ride in the business _ 13 years later, the design we pioneered is now the standard for almost every mountain bike made _

4 - BAR LINKAGE REAR SUSPENSION

4 links for high torsional rigidity and longer bearing/bushing life _ Shock function is affected by weight, force and gravity - not by pedalling forces _ With homework and testing it was evident the 4-Bar concept was the way to deliver a truly balanced & efficient ride _ By continuously refining testing and adapting 4-Bar, we're able to use this proven design as the basis for Kona Cross-Country, Downhill, Dual Slalom and Out of Bounds machines _

REINFORCED HEAD TUBE

Kona sloping top tube allows a longer head tube _ Distributes fork load over a greater area _ Fork, headset and frame maintain strength and integrity _ Long travel suspension forks ramp up that load so Kona headtubes have an expensive CNC machined reinforced area both top and bottom _

COLD-FORGED YOKES, DROPOUTS & ROCKER ARMS

They add strength and durability to combat the powerful forces exerted on the rear suspension system _Torsional ridigity is considerably superior as a result and critical to the efficient use of rear suspension _

DISC BRAKE MOUNT

Discs run vastly higher forces on a frame compared to a rim brake _ Kona disc tabs are integrated in the forged dropout not added on as a useless sales feature _ Any Kona with a disc tab has a reinforced chainstay - standard stays cannot handle the increased force of a disc brake _

K-NINE IS KONA'S GROUP OF TECHNICAL CLOTHING, PROTECTIVE WEAR, PACKS & BAGS _ WE BELIEVE THAT BIKE CLOTHING & GEAR SHOULD BE CONSIDERED AS FUNCTIONAL EQUIPMENT, NOT FASHION ACCESSORIES. OUR MISSION IS TO DESIGN, DEVELOP, TEST AND MAKE K-NINE HARDWEAR IN SAME WAY THAT WE MAKE OUR BIKES

www.konaworld.com/knine.html

2001 TECHNICAL INFORMATION

METAL SPECIFICATIONS

Our frames may be copied but that's not the whole story _ The Kona ride is set apart by the design and the careful choice of frame materials and specifications to match the intended use of the bike _ It's not enough to buy steel, aluminum or titanium from a catalog _ The process in creating a great ride relies on intelligent selection of materials, alloy, the location and type of taper and butting _ Followed by intensive machine and road testing by the Kona Clump before we start making anything _ See the 2001 Kona Technical Information booklet if you want to know everything _ www.konaworld.com/2001techarea.html

OUT OF BOUNDS DUAL SUSPENSION

CHECK OUT THE CLUMP RIDERS IN NEW WORLD DISORDER _

DIK COX _
NORTH SHORE BOY _
FACTORY CLUMP MANAGER

KONA FACTORY TEAM CLUMP

Out of Bounds is a term that really defines the New School of Mountain Biking _ After all Free Riding only describes riding that isn't competition _ The New Breed rides with so much intensity that it pushes the limits of off-road beyond recognition every day _ Out of Bounds trails start with the most demanding terrain and go beyond there with a circus of ramps, ladders, teeter-totters and drop-offs that would be unrecognizable to the pioneers of mountain biking _ The Kona Stinky series started off as an adapted 4-bar dual suspension Downhill machine that could provide a solid platform for extreme rider's styles but allow them to ride all day without the need to shuttle _ These bikes are heavy, all right – 35 pounds and more – because they have to be _ Five inches of front and rear travel with the strongest and most reliable parts to handle the toughest conditions _ Stinky _ The Smell is Sublime _

KONA CLUMP 7005 ALUMINUM TUBES _ HUGE SQUARE – OVAL TAPER SHAPE FOR HUGE MAINFRAME STRENGTH _ JOINED IN A POWERFUL MASS AT THE HEADTUBE SO GUSSETTING AND EXTRA WELDING ARE NOT NECESSARY _

KONA CLUMP 7005 ALUMINUM CUSTOM BUTTED

CLUMP FACTORY KONA TEAM

STINKY DEE-LUX

The entire Stinky series shares a completely revamped and even stronger Stinky frameset _ Seriously strong custom designed Kona Clump 7005 Aluminum tubeset _ Massive forged chainstay yoke, seatstay yoke & dropouts and huge chainstays for powerful acceleration _ Reinforced straight seattube allows wider seatpost height variation _ Massive reinforced contact area at headtube _ Five BIG inches of front and rear wheel travel _

TRUVATIV ISIS DRIVE SPLINED BOTTOM BRACKET _ A STEP UP IN BOTTOM BRACKET TECHNOLOGY _ FINALLY A SYSTEM THAT WORKS IN THE OUT OF BOUNDS _ WITH MORE THAN DOUBLE THE CONTACT AREA OF OTHER SYSTEMS _ THE STRONGEST CRANK/BB INTERFACE _

ROBBIE "AIR" BOURDON _ GO BIG

WHAT'S WITH THE WARRANTY"

There's something we've got to tell you up front _ Kona Out of Bounds, Dual Suspension and Downhill bikes are not an invitation to a wrecker's ball _ They're a tool for high performance enjoyment _ We probably build our OB, DS and DH bikes stronger than anyone has ever built a bike _ Yet anything can be broken, if you do the right – wrong move _ Ride Out of Bounds, you take responsibility for yourself and your equipment _ Just Ridin' Along is not a valid ticket to warranty _

OUT OF BOUNDS HARDTAIL

HAPPY LANDINGS _

There are basically two types of landings _ Steep landings require the shock absorption of rear suspension _ But flatter and slower and more precise jumps & drops call for the greater pedalling and balance efficiency of a hardtail _ But not any hardtail _ This group of bikes celebrates the idea that Out of Bounds is everywhere _ Any object on any trail or sidewalk, stairs or ramp is a challenge that can be met with the right preparation & attitude _ A skilled rider can land those obstacles, but what's left behind when you walk away is our challenge _ This pioneering group of New School machines has those landings nailed _ Now, you wanted to know about the Four inch fork travel, right _ Precision is the key factor for OB Hardtail _ Four just right, Five too long _ And the Double Chainring with a Ring Guard _ Agility, Accuracy, Quickness are the keys _ Speed is not an issue _ Survival Ranks High on our List _

CHUTE

Kona Clump 7005 Aluminum tubing with Cold Forged Bottom Bracket Yoke _ Four inch Bomber Z3 with QR20 Plus _ Race Face Prodigy Crank with Rock Guard and TruVativ ISIS splined B/B _ Hayes Hydraulic Disc Brakes _

SCAB

Out of Bounds Urban Assault Machine _ Good honest jumpin' fun with good parts you can count on _ Kona XXX Cromoly Frame _ Kona Cromoly Jump Fork _ TruVativ Firex Crank with Kona Ring of Fire Guard and TruVativ ISIS splined B/B _

KONA CLUMP FRAME TUBING

Heat-treated 7005 ThickWall Aluminum _ Starts with Beefy Square to Oval main tubes for a powerful mainframe_ Chunked-Out massive rear stays _ Build & Test & Build & Test _ Bring on the Big Stuff _

SLOPING TOP TUBE DESIGN

A Kona Trademark _ Right Up the Out of Bounds Alley _ More Clearance, More Maneuverable, More Acceleration, Stronger _

COLD-FORGED REAR DISC MOUNT DROPOUT

Hard rear wheel landings rely on a strong platform _ The integrated disc mount unit is a solid connection to a specifically designed non-drive chainstay _

REINFORCED HEAD TUBE

The result of a sloping top tube _ The head tube is longer _ Your frame, headset, fork, handlebar, stem and front wheel will be grateful _ And Reliable _

DOWNHILL & DUAL SLALOM

THE RACE TO BE NUMBER ONE

has long been in the Kona bloodstream _ The original Kona Mountain Bikes were designed as performance race machines _ Paddy's dream for a couple of years was to make the Numero Uno DH race machine period _ After Mountain Bike Action called Stab Primo the Best Production DH bike of 1999 and confirmed that rating again in 2000, The Bear was pretty happy _ But not satisfied _ A design may be great but can always be refined and improved _ And so it was _ But that is easier to do when you have a World Cup budget like the Primo _ The great challenge for 2001 was to make an affordable REAL Privateer DH bike _ something that could be comfortable for everyday Out of Bounds AND performance oriented for DH competition _ The new 6" Stab is the result _ Although some people might call it the Stinky Six _ The sleeper in this threesome is the DuDu _ Yes, it stands for Dual Slalom, Dual Suspension _ This is really Scott Beaumont's bike 'cuz he had the foresight to see that Dual slalom was getting bigger and called for Dual suspension _ The Kona Clump tube set was designed specifically for this bike _ Four and Four inches of travel front and rear seems to be the ideal ticket for this World Cup rig _

TRACY MOSELEY

Ranked Top Five in the World and Top Three in Europe _ Tracy's Podium Placings are making a mark on the New Breed of Downhillers _ Biology Major _ www.secondlevelsport.com/teamkona/team2000/riders/tracy/profile.htm

SCOTT BEAUMONT

Racing since he was a kid, Boom Boom got his start in BMX at 7 ... later took the BMX World Championship in 1995 & 1996 _ And that was just the beginning of his career _ Since his conversion to 26" wheels, Scott has risen steadily through the World Cup Dual Slalom ranks _ As we were writing this, he was 3rd overall in the World Cup _ His DuDu dual slalom machine was the result of Scott's collaboration with the Kona Design Team _

STAB PRIMO

World Cup Worthy Downhill Dream _ Two Years In A Row Top Production Downhill Mountain Bike (Mountain Bike Action) _ Up to Nine Inches Rear Wheel Travel _ NEW Stealthy Marzocchi Upside Down Shiver World Cup Fork with Seven Inches Travel _ NEW Kona Cromoly Steel Crank _ Powerful and Proven Kona Four – Bar Dual Suspension Linkage System _ Custom Fox DH coil-over rear shock _

CROSS COUNTRY HARDTAILS

PURE RACING HERITAGE _

The first Kona Mountain Bikes were bikes designed by Mountain Bike Hall of Fame racer Joe Murray specifically for the use of the Kona Factory Cross-Country race team _ Over the years, dozens of the World's top racers have tested and proven our pioneering sloping top tube hardtail design, helping us refine it down to the bare essentials of a pure cross-country performance machine _ This year's crop of cross-country hardtails is focused on trimming every gram off, but ONLY if it means that the bottom line of reliability is not hurt _ Details down to superlight inner tubes, alloy spoke nipples, Shimano Hollowtech cranks and bottom brackets, Titanium seat rails and Ultralight saddle foam are all part of the package that makes our hardtail racers an ideal selection for pure performance _

EXPLOSIF

Limited Production _ Kona Cross-Country Factory Team machine _ Lightest Kona Mountain Bike – 21.9 lbs (9.95 kilos) _ Superlight & Resilient Easton Scandium Aluminum frame tubing _ Pure selection of lightweight performance components _ Did we say Limited Production? _

CROSS COUNTRY HARDTAILS

THE (VERY SHORT) HISTORY OF KONA _

A bike is a bike is a bike? More than the metal & rubber – it's the ride _ Over the years of building bikes and riding our local North Shore trails, we've refined the classic Kona hardtail frame _ The long sloping top tube shape is classed as one of the best balanced and efficient single track designs anywhere _ The success of the ride can be attributed to the fact that it was tested and proven on the gnarly technical trails of our now famous back yard, Vancouver's North Shore Mountains _ Cross country riders around the world swear by the balance and confidence-inspiring ride. As a bike company we have always believed in the beauty of a great ride _ Feel the Flow _

LAVA DOME

The purists among you say Steel is Real _ Classic Steel Mountain Bike _ Kona Custom Cromoly Double-Butted Frame with Ritchey dropouts _ Rock Shox Jett fork with preload adjusters _ Excellent Expedition Machine _

KONA IS CONSTANTLY EVALUATING

& adjusting frame designs as rider demands and technology changes _ Rather than re-inventing the mountain bike every season based on the latest trend, we choose to fine-tune our proven designs _ While the sloping top tube design that we pioneered over a dozen years ago has been largely imitated, we continue to improve function with significant and subtle refinements _

LONGER HEAD TUBE for better shock distribution, stronger frame & longer headset bearing life _

LONGER THAN AVERAGE TOP TUBE gives more room for correct positioning and free body movement _

SLOPING FRAME DESIGN allows more stand-over clearance _

KONA CUSTOM BUTTED frame tubing is designed so that thickness, tapers and buttings are matched for a perfect ride _

CLOSER TO PARALLEL TOP AND DOWN TUBE for more vertically compliant main frame _

COMPACT REAR TRIANGLE for efficient acceleration _

NUNU

Fun Mountain Machine _ NuNu is Hawaiian Celebration _ Light Weight & Strong _ Great for your first race, street or all-day adventures _ Kona 7005 Butted Aluminum _ Rock Shox Jett fork with preload adjusters _

CROSS COUNTRY HARDTAILS

FIT & FUNCTION _

A lot of bicycle companies spend all their time developing prototype show machines that get front covers but never get made or even ridden _ as riders and not inventors, lifetime bike biz folks and not ego-heads, we've always felt the bikes we make for Rippin' Around are probably the most important bikes to build perfectly _ You will not find our bikes competing in the lowest price categories in your local shop, because there are some corners that just shouldn't be cut _ Rather than adopting a mass market mentality and building bikes for the lowest common denominator, we take great pride in adapting all the important Kona features to every single mountain bike we make _ One more thing that you will appreciate when it comes time to get fitted on the perfect size bike for you _ Kona size range is among the widest in the bike biz _ Just about every bike is made in 14" frame size, which allows riders as young as 8 to fit on a full-size wheel bike _ We also make tighter increments in sizing, with up to 7 sizes in every model _

KONA BEER PITCHER _ 64 OUNCE HEAVY-DUTY GLASS - KONA PINT GLASS _ 16 OUNCE HEAVY-DUTY US GLASS

FIRE MOUNTAIN

Another completely re-vamped Kona original model _ Kona 7005 Butted Aluminum _ Insync 266 Suspension fork with adjusters _ Completely true to the philosophy of a Genuine Kona ride _

WARRANTY

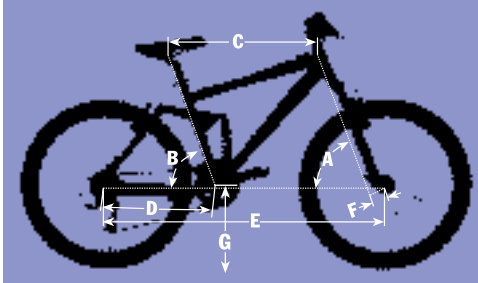

The Kona Limited Life time warranty is only available to registered Kona owners. The Kona Limited Life time warranty covers manufacturing and material defects but excludes crashes and bad landings.

Wild manoeuvers are fun but bikes and bones can break: have fun but beware!

Wear a helmet! Riders pictured in the catalog are professionals, don't try these stunts at home!

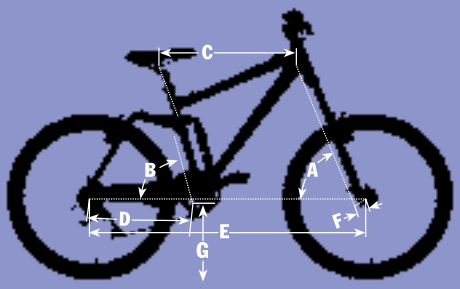

Specifications are subject to change.
Eat your greens!
