The Finest Saddle in the World

BROOKS

BROOKS Saddles are designed and manufactured with the skill that comes from many years of unremitting endeavour to produce the "perfect" saddle, and only the finest materials are used.

To those who sell BROOKS Saddles the features listed below are worthy of particular attention.

1. Specially selected leather dressed to the BROOKS specification is used for the saddle tops which are all hand-cut.

2. The tops are blocked by a unique process which forms the perfect saddle shape and which removes the permanent stretch from the leather while allowing the elastic stretch to remain. As a result of this the perfect shape is maintained throughout the life of the saddle.

3. Edges are specially finished to prevent friction and wear of clothing.

4. Metal fittings are made from only high grade steel and are enamelled or chromium plated by the most modern processes, to ensure maximum life of the finish.

5. The robust clips are so designed to provide both finer angles of adjustment and complete security.

6. Experts submit every saddle to a critical final examination, in addition to constant inspection during the course of manufacture.

It is BROOKS constant desire to ensure that their saddles give entire and lasting satisfaction and to this end hold themselves available at all times to offer technical assistance or advice.
